in a brilliant synthesis of genetic archaeological linguistic and climatic data
oppenheimer challenges current thinking with his claim that there was only one
successful migration out of africa in 1988 newsweek headlined the startling discovery
that everyone alive on the earth today can trace their maternal dna back to one woman
who lived in africa 150 000 years ago it was thought that modern humans populated
the world through a series of migratory waves from their african homeland now an even
more radical view has emerged that the members of just one group are the ancestors
of all non africans now alive and that this group crossed the mouth of the red sea a
mere 85 000 years ago it means that not only is every person on the planet descended
from one african eve but every non african is related to a more recent eve from that
original migratory group this is a revolutionary new theory about our origins that is both
scholarly and entertaining a remarkable account of the kinship of all humans further
details of the findings in this book are presented at bradshawfoundation.com

british prehistory will never look the same again professor colin renfrew university of cambridge stephen oppenheimer s extraordinary scientific detective story combining genetics linguistics archaeology and historical record shatters the myths we have come to live by it demonstrates that the anglo saxon invasions contributed just a tiny fraction 5 to the english gene pool two thirds of the english people reveal an unbroken line of genetic descent from south western europeans arriving long before the first farmers the bulk of the remaining third arrived between 7 000 and 3 000 years ago as part of long term north west european trade and immigration especially from scandinavia and may have brought with them the earliest forms of english language as for the celts the irish scots and welsh history has traditionally placed their origins in iron age central europe oppenheimer s genetic synthesis tells a different story there is indeed a deep divide between the english and the rest of the british but as this book reveals the division is many thousands of years older than previously thought be prepared to have all your cherished notions of english history and britishness swept away clive gamble

presents geological genetic linguistic archaeological and anthropological evidence that mankind developed from an ancient founder civilization located in southeastern asia

history has long maintained that the anglo saxon overtaking of the iron age celts was the origin of the british people celtic britain reconstructs the peopling of britain through a study of genetics climatology archaeology language culture and history and overturns that myth and others the anglo saxons who supposedly conquered the celts contributed only five to ten percent of the british gene pool the atlantic celts long believed to have migrated to britain from central europe around 300 bc during the iron age can be linked genetically to the people of basque country and linguistic evidence suggests that besides celtic languages a germanic type language similar to norse was also spoken in britain long before the arrival of the anglo saxons in this groundbreaking study stephen oppenheimer explains the surprising roots of the present day cultural identities of the english irish scottish and welsh

the question of how the world was first peopled by modern humans is one of the most controversial in science this book presents new findings that radically change our existing views of humanity s global migration its main argument centers around the theory that there was only one exodus one group of early modern humans from africa that went on to people the rest of the world it suggests that this exodus took place 80 000 years ago via a little known southern route across the mouth of the red sea it also argues that living malaysian tribes provide an extant link of the route pursued from there as modern humans beachcombed their way to australia in the space of 10 000 years these theories form an account of modern man s remaining journey around the world to the mammoth steppe heartland of asia to the now submerged continent of beringia and on to the last great unpeopled lands of the americas

this book is a compilation of essays exploring various aspects of the vedic tradition including the interpretation of vedic hymns the significance of divinities and their actions ritual and meaning as well as art and temple architecture it delves into the historical dimensions of the tradition tracing its roots through astronomy the archaeological record and the spread of indic ideas beyond the himalayas and across the seas to central asia europe and southeast asia the book also examines the connections between the inner and outer worlds using these insights to explain the nature of the mind in vedanta and the design of the Śrī cakra the enduring relevance of

these ideas is underscored especially as consciousness is now recognized as the final frontier of science

this edited book is the first major review of what has been achieved in borneo studies to date chapters in this book situate research on borneo within the general disciplinary fields of the social sciences with the weight of attention devoted to anthropological research and related fields such as development studies gender studies environmental studies social policy studies and cultural studies some of the chapters in this book are extended versions of presentations at the borneo research council s international conference hosted by universiti brunei darussalam in june 2012 and a borneo studies workshop organised in brunei in 2012 the volume examines some of the major debates and controversies in borneo studies including those which have served to connect post war research on borneo to wider scholarship it also assesses some of the more recent contributions and interests of locally based researchers in universities and other institutions in borneo itself the major strength of the book is the inclusion of a substantial amount of research undertaken by scholars working and teaching within the southeast asian region in particular there is an examination of research materials published in the vernacular notably the outpouring of work published in indonesian by the institut dayakologi in pontianak in doing so the book also addresses the urgent matters which have not received the attention they deserve specifically subjects themes and issues that have already been covered but require further contemplation elaboration and research and the scope for disciplinary and multidisciplinary collaboration in borneo studies the book is a valuable resource and reference work for students and researchers interested in social science scholarship on borneo and for those with wider interests in indonesia and malaysia and in the southeast asian region

this book is open access and available on bloomsburycollections com it is funded by knowledge unlatched winner of the 2020 british society for literature and science book prize in this important interdisciplinary study josie gill explores how the contemporary novel has drawn upon and intervened in debates about race in late 20th and 21st century genetic science reading works by leading contemporary writers including zadie smith kazuo ishiguro octavia butler and colson whitehead biofictions demonstrates how ideas of race are produced at the intersection of science and fiction which together create the stories about identity racism ancestry and kinship which

characterize our understanding of race today by highlighting the role of narrative in the formation of racial ideas in science this book calls into question the apparent anti racism of contemporary genetics which functions narratively rather than factually or objectively within the racialized contexts in which it is embedded in so doing biofictions compels us to rethink the long asked question of whether race is a biological fact or a fiction calling instead for a new understanding of the relationship between race science and fiction
