robin evans recasts the idea of the relationship between geometry and architecture drawing on mathematics engineering art history and aesthetics to uncover processes in the imagining and realizing of architectural form anyone reviewing the history of architectural theory robin evans observes would have to conclude that architects do not produce geometry but rather consume it in this long awaited book completed shortly before its author s death evans recasts the idea of the relationship between geometry and architecture drawing on mathematics engineering art history and aesthetics to uncover processes in the imagining and realizing of architectural form he shows that geometry does not always play a stolid and dormant role but in fact may be an active agent in the links between thinking and

imagination imagination and drawing drawing and building he suggests a theory of architecture that is based on the many transactions between architecture and geometry as evidenced in individual buildings largely in europe from the fifteenth to the twentieth century from the henry vii chapel at westminster abbey to le corbusier s ronchamp from raphael s s eligio and the work of piero della francesca and philibert delorme to guarino guarini and the painters of cubism evans explores the geometries involved asking whether they are in fact the stable underpinnings of the creative intuitive or rhetorical aspects of architecture in particular he concentrates on the history of architectural projection the geometry of vision that has become an internalized and pervasive pictorial method of construction and that until now has played only a small part in the development of architectural theory evans describes the ambivalent role that pictures play in architecture and urges resistance to the idea that pictures provide all that architects need suggesting that there is much more within the scope of the architect s vision of a project than what can be drawn he defines the different fields of projective transmission that concern architecture and investigates the ambiguities of projection and the interaction of imagination with projection and its metaphors

architectural facades now have the potential to be literally kinetic through automated sunscreens and a range of animated surfaces this book explores the aesthetic potential of these new types of moving facades critique of theory and practice in architecture is combined here with ideas from kinetic art of the 1960 s from this background the basic principles of kinetics are defined and are used to generate experimental computer animations by classifying the animations a theory of kinetic form called state change is developed this design research provides a unique and timely resource for those interested in the capacity of kinetics to enliven the public face of architecture extra material including animations can be seen at [kineticarch.net/statechange](http://kineticarch.net/statechange)

conversant in contemporary theory and architectural history stan allen argues that concepts in architecture are not imported from other disciplines but emerge through the materials and procedures of architectural practice itself drawing on his own experience as a working architect he examines the ways in which the tools available to the architect affect the design and production of buildings this second edition includes revised essays together with previously unpublished work allen s seminal piece on field conditions is included in this reworked revised and redesigned volume a compelling read for student and practitioner alike

following on the success of *Surface* Bruno's previous book with us in this new one she explores the act and art of projection in its manifold guises and what those can tell us about how we think and feel and create the world we inhabit this is not just an exploration of the psychological operation of projection the idea that we cast onto others the qualities we refuse to acknowledge in ourselves it is a major work of cultural history and media archaeology as a way to transform space and atmosphere projection has a long history in the arts dating back to shadow plays camera obscuras magic lantern shows and phantasmagoria but the atmosphere of projection is not a thing of the past alone it is alive and well today it continues to fascinate us as screens filled with moving figures pervade the spaces of the art gallery and the museum as well as the environments of our daily lives what is the root of our fascination how does it manifest in contemporary art how do we define atmosphere how is projection an atmosphere are these two modalities conceptually and historically related and how so why are artists today so interested in environments and in elements of projection to explain this continual fascination with projection and atmosphere Bruno traverses psychoanalysis architecture the history of science visual art and moving image culture to see how projective mechanisms and their environments have developed over time
