this valuable book examines the complex psychological processes involved in answering different types of survey questions drawing on both classic and modern research from cognitive psychology social psychology and survey methodology the authors examine how survey responses are formulated and they demonstrate how seemingly unimportant features of the survey can affect the answers obtained the book provides a comprehensive review of the sources of response errors in surveys and it offers a coherent theory of the relation between the underlying views of the public and the results of public opinion polls topics include the comprehension of survey questions the recall of relevant facts and beliefs estimation and inferential processes people use to answer survey questions the sources of the apparent instability of public opinion the difficulties in getting responses into the required format and the distortions introduced into surveys by deliberate misreporting

high response rates have traditionally been considered as one of the main indicators of survey quality obtaining high response rates is sometimes difficult and expensive but clearly plays a beneficial role in terms of improving data quality it is becoming increasingly clear however that simply boosting response to achieve a higher response rate will not in itself eradicate nonresponse bias in this book the authors argue that high response rates should not be seen as a goal in themselves but rather as part of an overall survey quality strategy based on random probability sampling and aimed at minimising nonresponse bias key features of improving survey response a detailed coverage of nonresponse issues including a unique examination of cross national survey nonresponse processes and outcomes a discussion of the potential causes of nonresponse and practical strategies to combat it a detailed examination of the impact of nonresponse and of techniques for adjusting for it once it has occurred examples of best practices and experiments drawn from 25 european countries supplemented by the european social survey ess websites containing materials for the measurement and analysis of nonresponse based on detailed country level response process datasets the book is designed to help survey researchers and those commissioning surveys by explaining how to prioritise the reduction of nonresponse bias rather than focusing on increasing the overall response rate it shows substantive researchers how nonresponse can impact on substantive outcomes

paper and electronic surveys of students and faculty have become increasingly popular in higher education research and are now used in almost all facets of assessment and planning yet as the demand for survey research has increased survey response rates have been falling low response rates are problematic because they can call into question the validity of the results as well as increase survey administration costs this volume examines an array of survey research problems and best practices with the aim of providing readers with ways to increase response rates while controlling costs many institutional researchers face additional demands such as administering multiple surveys over time or administering surveys on sensitive subjects such as student alcohol or drug use new technologies for survey administration also provide many different options this volume discusses these issues in terms of the survey research literature as well as the experiences of practitioners in the field this is the 121st volume of the higher education quarterly journal new directions for institutional research

there is increasing interest in the study of nonresponse in statistical surveys as there is a need to reduce the level of nonresponse in order to

increase the validity of the results and to deal with the problem of nonresponse once it has arisen it is possible to reduce the amount of nonresponse in a survey but not possible to avoid it completely therefore there is a need for techniques that enable the survey statistician to estimate the level of nonresponse and adjust for it accordingly in order to improve the results this book presents a practical overview of techniques for estimating nonresponse in statistical surveys and for adjusting for it once it has occurred it also covers the related topics of frame imperfections and coverage errors in surveys featuring many worked examples and implementation of the methods in a number of statistical software packages the text is based upon a manual developed at statistics sweden and used extensively by government statisticians working with data from real surveys features provides an overview of methods for the estimation of nonresponse in statistical surveys covers a range of methods for nonresponse adjustment particularly reweighting and imputation includes guidelines for dealing with frame imperfections and coverage errors features worked examples throughout using real data includes implementation of the methods in a range of statistical software it will appeal to researchers and practitioners analyzing data from statistical surveys also suitable as supplementary reading for graduate students of survey statistics

this study examines the response rates for surveys used in organizational research we analyzed 1607 studies published in the years 2000 and 2005 in 17 refereed academic journals and we identified 490 different studies that utilized surveys we examined the response rates in these studies which covered more than 100 000 organizations and 400 000 individual respondents the average response rate for studies that utilized data collected from individuals was 52.7 percent with a standard deviation of 20.4 while the average response rate for studies that utilized data collected from organizations was 35.7 percent with a standard deviation of 18.8 key insights from further analysis include relative stability in response rates in the past decade and higher response rates for journals published in the usa the use of incentives was not found to be related to response rates and for studies of organizations the use of reminders was associated with lower response rates also electronic data collection efforts e.g. email phone web resulted in response rates as high as or higher than traditional mail methodology we discuss a number of implications and recommendations

based on an analysis of 37 surveys assesses the degree of response accuracy and reviews and evaluates factors which affect response validity
