the problem of the relation between our bodies and our minds and especially of the link between brain structures and processes on the one hand and mental dispositions and events on the other is an exceedingly difficult one without pretending to be able to foresee future developments both authors of this book think it improbable that the problem will ever be solved in the sense that we shall really understand this relation we think that no more can be expected than to make a little progress here or there we have written this book in the hope that we have been able to do so we are conscious of the fact that what we have done is very conjectural and very modest we are aware of our fallibility yet we believe in the intrinsic value of every human effort to deepen our understanding of ourselves and of the world we live in we believe in humanism in human rationality in human science and in other human achievements however fallible they are we are unimpressed by the recurrent intellectual fashions that belittle science and the other great human achievements an additional motive for writing this book is that we both feel that the debunking of man has gone far enough even too far it is said that we had to learn from copernicus and darwin that man's place in the

universe is not so exalted or so exclusive as man once thought that may well be

in this book the author has collected a number of his important works and added an extensive commentary relating his ideas to those of other prominent names in the consciousness debate the view presented here is that of a convinced dualist who challenges in a lively and humorous way the prevailing materialist doctrines of many recent works also included is a new attempt to explain mind brain interaction via a quantum process affecting the release of neurotransmitters john eccles received a knighthood in 1958 and was awarded the nobel prize for medicine physiology in 1963 he has numerous other awards honouring his major contributions to neurophysiology

sir john eccles a distinguished scientist and nobel prize winner who has devoted his scientific life to the study of the mammalian brain tells the story of how we came to be not only as animals at the end of the hominid evolutionary line but also as human persons possessed of reflective consciousness

ever since charles darwin first published the origin of species on november 24 1859 the subject of origins has been one of the most controversial topics around sadly it also is a subject that is fraught with erroneous theories and concepts most students today are taught that organic evolution is not a theory but a fact that all reputable scientists accept disclaimers from the evolutionary community notwithstanding such a claim is quite simply wrong we believe it is time for someone to offer what renowned news commentator paul harvey would call the rest of the story that is what the truth about human origins does it tells the rest of the story as it discusses the scientific facts about mankind's beginning for example it investigates the record of the rocks as that record relates to human evolution it demonstrates how evolutionary theory is unable to explain things like the origin of gender and sexual reproduction the origin of language and communication the origin of the brain the mind and human consciousness and the origin of skin colors and blood types it also examines in an in depth fashion the so called molecular evidence of human evolution

with testimonials from people who have lived through near death experiences as well as research and opinions from a multidisciplinary panel of prestigious scholars on the other side of life offers a balanced look at these most mysterious experiences and the science and theology behind them

includes subject section name section and 1968 1970 technical reports

the definitive reference work on science and christian belief how does christian theology relate to scientific inquiry what are the competing philosophies of science and do they work with a christian faith based on the bible no reference work has covered this terrain sufficiently until now featuring entries from over 140 international contributors the dictionary of christianity and science is a deeply researched peer reviewed fair minded work that illuminates the intersection of science and christian belief in one volume you get reliable summaries and critical analyses of over 450 relevant concepts theories terms movements individuals and debates you will find answers to your toughest questions about faith and science from the existence of adam and eve to the age of the earth evolution and string theory features include over 450 entries that will help you think through some of today's most challenging scientific topics
