although the u s environmental protection agency presented a comprehensive review of the scientific literature in its 2003 draft reassessment of the risks of dioxin the agency did not sufficiently quantify the uncertainties and variabilities associated with the risks nor did it adequately justify the assumptions used to estimate them according to this new report from the national academies national research council the committee that wrote the report recommended that epa re estimate the risks using several different assumptions and better communicate the uncertainties in those estimates the agency also should explain more clearly how it selects both the data upon which the reassessment is based and the methods used to analyze them

the goals of the science of photobiology can be divided into four categories to develop i ways to optimize the beneficial effects of light on man and his environment 2 methods to protect organisms including man from the detrimental effects of light 3 photochemical tools for use in studies of life processes and 4 photochemical therapies in medicine to achieve these goals will require the knowledgeable collaboration of biologists chemists engineers mathematicians physicians and physicists because photobiology is a truly multidisciplinary science while a multidis ciplinary science is more intellectually demanding it also has a greater potential for unexpected breakthroughs that can occur when data from several areas of science are integrated into new concepts for theoretical or practical use photochemical and photobiological reviews continues to provide in depth coverage of the many specialty areas of photobiology it is hoped that these reviews will provide an important service to the younger scientists in the field and to senior scientists in related fields because they provide a ready access to the recent literature in the field and more importantly they frequently offer a critical evaluation of the direction that the field is taking or suggest a redirection when appropriate since it is important that this review series remain responsive to the needs of photochemists and photobiologists the editor would value comments and suggestions from its readers
