many books have been written about strategy tactics and great commanders this is
the first book to deal exclusively with the nature of command itself and to trace its

development over two thousand years from ancient greece to vietnam it treats historically the whole variety of problems involved in commanding armies including staff organization and administration communications methods and technologies weaponry and logistics and it analyzes the relationship between these problems and military strategy in vivid descriptions of key battles and campaigns among others napoleon at jena moltke s königgrätz campaign the arab israeli war of 1973 and the americans in vietnam martin van creveld focuses on the means of command and shows how those means worked in practice he finds that technological advances such as the railroad breech loading rifles the telegraph and later the radio tanks and helicopters all brought commanders not only new tactical possibilities but also new limitations although vast changes have occurred in military thinking and technology the one constant has been an endless search for certainty certainty about the state and intentions of the enemy s forces certainty about the manifold factors that together constitute the environment in which war is fought from the weather and terrain to radioactivity and the presence of chemical warfare agents and certainty about the state intentions and activities of one s own forces the book concludes that progress in command has usually been achieved less by employing more advanced technologies than by finding ways to transcend the limitations of existing ones
