the book is intended to serve as a textbook for b a b sc hons and pass course students of indian universities and abroad it is also meant for the engineering students and other professional competitive examinations such as ias ies pcs etc the text starts with the introduction of coordinates of a point in a space distance formula projection direction cosines locus and followed by the study of the plane straight line sphere cone cylinder central conicoids and paraboloids an appendix has been given on general equation of second degree the salient features of the book are presentation of the subject in natural way description of the concepts with justification grading of exercises exercises solved and unsolved after each section and miscellaneous set of exercises at the end of each chapter notes and remarks at proper places

the goal of this book is to present a unified mathematical treatment of diverse problems in mathematics physics computer science and engineer ing using geometric algebra geometric algebra was invented by william kingdon clifford in 1878 as a unification and generalization of the works of grassmann and hamilton which came more than a quarter of a century before whereas the algebras of clifford and grassmann are well known in advanced mathematics and physics they have never made an impact in elementary textbooks where the vector algebra of gibbs heaviside still predominates the approach to clifford algebra adopted in most of the ar ticles here was pioneered in the 1960s by david hestenes later together with garret sobczyk he developed it into a unified language for math ematics and physics sobczyk first learned about the power of geometric algebra in classes in electrodynamics and relativity taught by hestenes at arizona state university from 1966 to 1967 he still vividly remembers a feeling of disbelief that the fundamental geometric product of vectors could have been left out of his undergraduate mathematics education geometric algebra provides a rich general mathematical framework for the develop ment of multilinear algebra projective and affine geometry calculus on a manifold the representation of lie groups and lie algebras the use of the horosphere and many other areas this book is addressed to a broad audience of applied mathematicians physicists computer scientists and engineers

we say that the processes going on in the world about us are asymmetric in time or display an arrow of time yet this manifest fact of our experience is particularly difficult to explain in terms of the fundamental laws of physics this volume reconciles these profoundly conflicting facts
