drawing upon the many disciplines that have contributed to brain research anatomy physiology clinical neurology psychology psychiatry the author traces three centuries of ideas about movement and the brain

this book examines the history of western attempts to explain how messages might be sent from the sense organs to the brain and from the brain to the muscles it focuses on a construct called animal spirit which would permeate philosophy and guide physiology and medicine for over two millennia

thinking about thinking mind and meaning in the era of techno nihilism addresses our existential crisis by reminding us of the conditions for meaning that have been obscured by the modern technological mentality madden weaves together disparate insights from wittgenstein hegel aristotle heidegger merleau ponty nietzsche sophocles and others in an attempt to account for our mindedness in terms of its inextricable connection to a world capable of inspiring our care the mind is not a discrete entity locked behind the skull or withdrawn into a ghostly realm but a participation in an inheritance biological and cultural held in common with other participants

and taking responsibility for that world is crucial for the meaning the ever increasing technological mediation of our lives undermines this worldliness we are subsequently losing our minds and as our mindedness fades so goes our sense of dignity and value madden makes this case deploying insights from phenomenology analytic philosophy aristotelianism neuroscience and cognitive science and along the way confronts the mind body problem freedom artificial intelligence transhumanism and nihilism more importantly he invites the reader into an accessible dialogue concerning issues of grave importance to the meaning of our lives

part of the oxford textbooks in clinical neurology series the oxford textbook of clinical neurophysiology includes sections that provide a summary of the basic science underlying neurophysiological techniques a description of the techniques themselves including normal values and a description of the use of the techniques in clinical situations much of diagnostic neurophysiology is essentially pattern recognition which is illustrated throughout the text using audio and video examples divided into four key sections this book begins with the scientific basis of clinical neurophysiology section 1 before exploring specific techniques including electromyography intracranial eeg recordings and magnetoencephalography section 2 the final two sections explore clinical aspects of both the peripheral nervous system section 3 and the central nervous system section 4

a new theory of intelligence from a renowned and highly respected writer on brains and evolution what constitutes consciousness or intelligence this is a question that has proved to philosophers to be an intellectual dead end now william calvin by looking closely at animal and human intelligence and a wide range of evolutionary evidence has broken new ground that will help us understand mental illness and illuminate the whole notion of what it is to be a person calvin begins by asking what intelligence is he moves to the why of intelligence where evidence from chimpanzees is important before coming to the all important how of intelligence the cerebral codes and darwinian processes that operate within seconds to produce intelligent thought and action
