every foreign traveler in japan is delighted by the verdant forest shrouded mountains that thrust skyward from one end of the island chain to the other the japanese themselves are conscious of the lush green of their homeland which they sometimes refer to as the green archipelago yet based on its fragile geography and centuries of extremely dense human occupation japan today should be an impoverished slum ridden peasant society subsisting on a barren eroded moonscape characterized by bald mountains and debris strewn lowlands in fact as conrad totman argues in this pathbreaking work based on prodigious research this lush verdure is not a monument to nature s benevolence and japanese aesthetic sensibilities but the hard earned result of generations of human toil that have converted the archipelago into one great forest preserve indeed the author shows that until the late 1600s japan was well on her way to ecological disaster due to exploitative forestry during the tokugawa period however an extraordinary change took place resulting in a system of regenerative forestry that averted the devastation of japan s forests the green archipelago is the only major western language work on this subject and a landmark not only in japanese history but in the history of the environment
