depuis le colloque rogue waves 2000 des avancées significatives ont été réalisées dans la description et la proposition de modèles susceptibles d'améliorer notre compréhension des vagues scélérates les questions qui se posent maintenant concernent l'influence que ces résultats doivent avoir sur les normes et pratiques de la construction navale et offshore et s'ils apportent des possibilités d'amélioration pour les systèmes de prévision et d'alerte le colloque rogue waves 2004 de Brest a de nouveau rassemblé de nombreux scientifiques et ingénieurs qui ont pu y confronter et discuter leurs positions sur le sujet

laboratory data are presented for the runup on a uniform slope of the leading waves of an axially symmetric dispersive train of surface gravity waves the waves emanated from an impulsive disturbance simulating an underwater explosion a significant aspect of the test conditions was the limited dispersion of the wave train resulting from the relatively short propagation distance and the relatively large area covered by the wave generating disturbance two general classes of wave trains were studied distinguished by an initial rise of the water surface a crest at the front of the wave train in one case and an initial fall trough in the other in both cases the first wave in the wave train produced the greatest runup the dominance of the first wave was more marked in the larger

disturbances higher waves the more important leading crest case simulated an explosion of the shallow water type this type is expected from explosions of large but not unrealistic magnitude in relatively shallow coastal waters on a 1/14 slope the leading crest did not break and the ratio of runup to wave height was constant 3/3 for ratios of wave height to water depth at the toe of the slope  $h/d \leq 0.073$  on a 1/20 slope the leading crest broke with  $h/d > 0.035$  the runup of nonbreaking leading crests was 5 to 25 less than on the 1/14 slope and breaking decreased the runup still further author

david hackett fischer has gained a reputation for making history come alive even stories as familiar as paul revere's ride or as complex as the transit of british culture to america now he has done it again in the great wave a history of price movements and cultural change from the middle ages to the present fischer examines price records in many nations and finds our great waves of rising prices in the thirteenth sixteenth eighteenth and twentieth centuries all were marked by price swings of increasing volatility falling real wages a growing gap between rich and poor and an increase in violent crime family disintegration and cultural despair each long wave reached its climax in a period of political revolution demographic contraction and economic collapse every crisis was followed by sharp deflation and then by a long era of price equilibrium rising real wages falling returns to capital growing equality and accelerating population growth aggregate demand increased and another wave began fischer concludes that we are living in the late stages of the twentieth century price revolution he does not predict what will happen next rather he ends with an analysis of where we might go from here and what our choices are now
