more than three million high school students take five million advanced placement exams each year. Yet remarkably little is known about how this sixty year old privately run program has become one of the U.S. education's greatest successes. From its mid century origin as a tiny option for privileged kids from posh schools, AP has also emerged as a booster rocket into college for hundreds of thousands of disadvantaged youngsters. It challenges smart kids, affects school ratings, affords rewarding classroom challenges to great teachers, tunes up entire schools and draws vast support from philanthropists, education reformers and policymakers. AP stands as America's foremost source of college level academics for high school pupils. Praised for its rigor and integrity, more than 22,000 schools now offer some or many of its thirty eight subjects, from Latin to calculus, art to computer science. But challenges abound today as AP faces stiffening competition, especially dual credit curriculum wars, charges of elitism, misgivings by elite schools and universities, and the arduous work of infusing rigor into schools that lack it. Academic success into young people unaccustomed to it in today's polarized climate can AP maintain its lofty standards and overcome the hostility, politics and despair that have sunk so many other bold education ventures. AP's unsung success story of American education is a unique account richly documented and thoroughly readable of the AP program in all its strengths and travails, written by two of America's most respected education analysts.

a review and study guide for advanced placement study in biology

draws together the most recent and rigorous research on the strengths and weaknesses of the advanced placement program. Examines closely the differences between AP and other high school courses as well as variations among AP courses. In depth studies gauge the impact of AP coursework on student performance in college. Finally, researchers examine the use of AP information in college admissions. *From publisher description*

This study explores the relationship between college graduation rates and student participation and success in advanced placement AP courses and exams. We reviewed three approaches to examining this relationship: 1) comparing the college graduation rates of AP and non-AP students; 2) comparing the college graduation rate of AP and non-AP students after controlling for students' demographics and prior achievement and the demographics of their high schools; and 3) examining the relationship between percent of students from a given high school graduating from college and the school's percent of students in advanced placement. We conclude that the percent of a school's students who take and pass AP exams is the best AP related indicator of whether the school is preparing increasing percentages of its students to graduate from college. The importance of AP exam results indicates the need for schools and districts to pay close attention not only to the quality of teaching in advanced placement courses but also to improving the academic preparation
