an examination of the role played by the bible in the emergence of natural science

this book tries to uncover science's discoverer and explain why the conception of science has been changing during the centuries and why science can be beneficial and dangerous for humanity far from being hermetic this research can be interesting for all who want to understand deeper what really conditions the place of science in culture

a thoroughly revised introduction new editorial footnotes and an updated bibliography complete this revised edition of new atlantis and the great instauration presented here is the standard nineteenth century text of bacon's works as annotated by jerry weinberger editor also included are a list of principal dates in the life of francis bacon and a note on the texts

this book seeks to illustrate the interconnections of science and philosophy with religion and politics in the early modern period by focusing on the institutional dynamics of the university much of the work is devoted to one key university that of cambridge and examines the major issues of the institutional setting of newton's work the religious and political circumstances that favoured its dissemination and the way in which it was dealt with in the curriculum but the author also seeks to place the problem of the role of science in the early modern university in a larger european context to do so he includes a close prosopographical analysis of the scientific community from the mid 15th to the end of the 18th century and discusses the complex relations between the universities and the enlightenment

a compendium offering broad reflections on the scientific revolution from a spectrum of scholars engaged in the study of 16th and 17th century science many accepted views and interpretations of the scientific revolution are challenged

seventeenth century europe witnessed an extraordinary flowering of discoveries and innovations this study beginning with the dutch invented telescope of 1608 casts galileo s discoveries into a global framework although the telescope was soon transmitted to china mughal india and the ottoman empire those civilizations did not respond as europeans did to the new instrument in europe there was an extraordinary burst of innovations in microscopy human anatomy optics pneumatics electrical studies and the science of mechanics nearly all of those aided the emergence of newton s revolutionary grand synthesis which unified terrestrial and celestial physics under the law of universal gravitation that achievement had immense implications for all aspects of modern science technology and economic development the economic implications are set out in the concluding epilogue all these unique developments suggest why the west experienced a singular scientific and economic ascendancy of at least four centuries

francis bacon is considered the father of modern science he proposed at his time a great reformation of all process of knowledge for the advancement of learning divine and human he called it *instauratio magna* the great instauration bacon planned his great instauration in imitation of the divine work the work of the six days of creation as defined in the bible leading to the seventh day of rest or sabbath in which adam s dominion over creation would be restored thus dividing the great reformation in six parts 1 partitions of the sciences 2 new method 3 natural history 4 ladder of the intellect 5 anticipations of the 2nd philosophy 6 the second philosophy or active science

arguing against the widely held belief that technology and religion are at war with each other david f noble s groundbreaking book reveals the religious roots and spirit of western technology it links the technological enthusiasms of the present day with the ancient and enduring christian expectation of recovering humankind s lost divinity covering a period of a thousand years noble traces the evolution of the western idea of technological development from the ninth century when the useful arts became connected to the concept of redemption up to the twentieth when humans began to exercise god like knowledge and powers noble describes how technological advance accelerated at the very point when it was invested with spiritual significance by examining the imaginings of monks explorers magi scientists freemasons and engineers this historical account brings to light an other worldly inspiration behind the apparently worldly endeavors by which we habitually define western civilization thus we see that isaac newton devoted his lifetime to the interpretation of prophecy joseph priestley was the discoverer of oxygen and a founder of unitarianism freemasons were early advocates of industrialization and the fathers of the engineering profession wernher von braun saw spaceflight as a millenarian new beginning for humankind the narrative moves into our own time through the technological enterprises of the last half of the twentieth century nuclear weapons manned space exploration artificial intelligence and genetic engineering here the book suggests that the convergence of technology and religion has outlived its usefulness that though it once contributed to human well being it has now become a threat to our survival viewed at the dawn of the new millennium the technological means upon which we have come to rely for the preservation and enlargement of our lives betray an increasing impatience with life and a disdainful disregard for mortal needs david f noble thus contends that we must collectively strive to disabuse ourselves of the inherited religion of technology and begin rigorously to re examine our enchantment with unregulated technological advance

bacon s scientific method is commonly thought to proceed mechanically to its infallible end in this book however urbach presents bacon s philosophy in an alternative light which acquits him of several errors urbach describes bacon as an experimental scientist and examines the criticisms made against him one of which was that he did not understand the roles of mathematics and science bacon was not a traditional metaphysician and was alarmed at the lack of progress in science since ancient times especially the lack of practical results he attempted to open up a middle path between practical experience and unsupported theorizing the author intends to clarify rather than defend bacon s work
