from the beginning of world war two the raf s bomber command had been the only means of striking hitler s reich and its war machine the entry into the war of the united states and the subsequent arrival in the uk of the eighth air force was to more than double the allied capability the flying fortress and liberator heavy bombers were mostly flown across the atlantic by their young unblooded aircrew and many succumbed en route and never arrived flying in north europe was a different ball game from american skies and it took a considerable time before the crews familiarised themselves with the vagaries of fog low cloud rain and snow the american bombers bristled with defensive armament and elected to fly in close defensive formation during the day leaving the raf to carry out nighttime raids with the arrival of long range protective escort fighters the task became a little easier this book explains including many first hand accounts how the american bomber force helped fight to eventual victory by decimating german industry transport systems and breaking the nazi war spirit author martin bowman is one of britain s foremost aviation historians and has written many books and articles illustrations 60 b w photographs

this book is the only full scale account of the strategic air offensive against germany published in the last twenty years and is the only one that treats the british and the americans with parity much of what levine writes about british operations will be unfamiliar to american readers he has stressed the importance of winning air superiority and the role of escort fighters in strategic bombing and has given more attention to the german side than most writers on air warfare have levine gets past a simple account of what we did to them and describes the target systems and german countermeasures in detail providing exact yet dramatic accounts of the great bomber operations the ruhr dams ploesti and regensburg and schweinfurt the book is broad guaged touching many matters from the development of bombing doctrine before the war to the technical development of the luftwaffe and the raf jets and v weapons to the role of the heavy bombers in supporting land and sea operations levine stresses the impact of bombing on the war and generally endorses the strategic air campaign as worthwhile and effective but he concludes that many mistakes were made by the allies both the british and the americans in tactics the development of equipment and in the selection of targets levine sees strategic bombing as a powerful tool that was often misused particularly when the doctrine of area bombing flourished scholars students and buffs interested in world war ii and or the history of aviation will find this study of great interest

they came in waves from the schools factories farms and city streets some driven by patriotism but most with a dream bernard nolan was one of the nearly 200 000 pilots who earned his wings during world war ii nolan relates the journey of a boy with a passion for flying airplanes how an uneducated kid from a fractured home environment weaseled his way into the armys aviation cadet program and how his deliverance through flying threatened to unravel in the cold lethal skies over europe in 1944 the author has imbedded his experiences within the context of the history of the air battle over europe in 1943 and 1944 he explores why the eighth air force lost a battle of attrition with the luftwaffe in 1943 and how and why it eventually triumphed in mid 1944 in the cockpit realism and little known details are provided in discussions of evolving technology formation assembly and flying ever changing tactics by both sides prospects for surviving aerial combat what it is like to be shot down and excellent comparisons of the two pivotal aircraft the b 24 and b 17 nolan flew both in combat
