gestalt aether theory recognizes that a reality must exist outside of the ordered universe that we live in but claims that it is a reality that is represented by chaos
where anything can and does happen where multiple universes are possible and where time place and causality have no meaning gestalt aether theory explains
physics in terms of the ordered universe that we live in quantum mechanics and standard theory attempt to explain physics in terms of the chaos that exists outside
of the ordered universe take for instance the propagation of light from a point a to a point b situated a hundred meters away quantum mechanics would have one

believe that from the time that light leaves the point of origin to the time that it is detected that it ceases to have a corporeal existence and exists instead as a probability wave function in this state it is everywhere and nowhere at once in order to cover the hundred meters from point a to b it has to first enter into multiple universes hence the multi verse theory gat on the other hand explains the propagation of light from a to b in terms that reflect reality according to gestalt aether theory light travels through a medium and as a consequence spreads out in accordance with the inverse square law gat states that light is a wave possessing some of the characteristics of a particle somewhat like the ultrasonic sound waves used in lithotripsy where a sound wave is used to break stones namely a wave that possesses some of the properties of a particle and can therefore retain its individual energy identity independently of the intensity of the wave thus light in gat gestalt aether theory propagates just as any other wave travelling in a medium it follows the same rules as the waves that are created when a stone is dropped into a pool of water the whole of the ordered universe including gravity neutrinos radio waves and super conductivity are explained in similar terms

focusing on the unresolved debate between newton and huygens from 300 years ago the nature of light what is a photon discusses the reality behind enigmatic photons it explores the fundamental issues pertaining to light that still exist today gathering contributions from globally recognized specialists in electrodynamics and quantum optics the book begins by clearly presenting the mainstream view of the nature of light and photons it then provides a new and challenging scientific epistemology that explains how to overcome the prevailing paradoxes and confusions arising from the accepted definition of a photon as a monochromatic fourier mode of the vacuum the book concludes with an array of experiments that demonstrate the innovative thinking needed to examine the wave particle duality of photons looking at photons from both mainstream and out of box viewpoints this volume is sure to inspire the next generation of quantum optics scientists and engineers to go beyond the copenhagen interpretation and formulate new conceptual ideas about light matter interactions and substantiate them through inventive applications
