academics community activists and politicians have rediscovered regionalism insisting that regions are critical functional units in a world wide economy and just as important critical functional units in individual american lives more and more of us travel across city county even state borders every morning on our way to work our television radio and print media rely on a regional marketplace our businesses large and small depend on suppliers workers and customers who rarely reside in a single jurisdiction the parks riverfronts stadiums and museums we visit draw from and provide an identity to an area much larger than a single city the fumes gases chemicals and run off that pollute our air and water have no regard for municipal boundaries this book lays out a variety of opinions on regionalism its history and its future while the essays do not comprise a debate pro and con about regionalism they do provide a wide array of perspectives based on the authors diverse backgrounds and experience some contributors have made close academic studies of how regional action occurs in various states like minnesota california and oregon others give an historical account of a particular region like that surrounding new york city and yet others point out aspects of regionalism race especially that should not be ignored why did past efforts at regional collaboration fall apart what did regionalist efforts of decades ago leave undone and what new goals should regionalists set without an understanding of these questions policymakers and advocates may find themselves reinventing the region this book provides an

important understanding of how regionalism has played out in the past how policies shape places and the possibilities and limits of regional action bruce j katz director of the brookings institution center on urban and metropolitan policy was formerly chief of staff at the u s department of hous

in america today we see rampant development unsustainable resource exploitation and commodification ruin both natural and built landscapes disconnecting us from our surroundings and threatening our fundamental sense of place meanwhile preservationists often respond with a counterproductive stance that rejects virtually any change in the landscape in the working landscape peter cannavò identifies this zero sum conflict between development and preservation as a major factor behind our contemporary crisis of place cannavò offers practical and theoretical alternatives to this deadlocked polarized politics of place by proposing an approach that embraces both change and stability and unifies democratic and ecological values creating a working landscape place cannavò argues is not just an object but an essential human practice that involves the physical and conceptual organization of our surroundings into a coherent enduring landscape this practice must balance development which he calls founding and preservation three case studies illustrate the polarizing development preservation conflict the debate over the logging of old growth forests in the pacific northwest the problem of urban sprawl and the redevelopment of the former site of the world trade center in new york city cannavò suggests that regional democratic governance is the best framework for integrating development and preservation and he presents specific policy recommendations that aim to create a working landscape in rural suburban and urban areas a postscript on the mass exile displacement and homelessness caused by hurricane katrina considers the implications of future climate change for the practice of place

we live in a self proclaimed urban age where we celebrate the city as the source of economic prosperity a nurturer of social and cultural diversity and a place primed for democracy we proclaim the city as the fertile ground from which progress will arise without cities we tell ourselves human civilization would falter and decay in cities in the urban age robert a beauregard argues that this line of thinking is not only hyperbolic it is too celebratory by half for beauregard the city is a cauldron for four haunting contradictions first cities are equally defined by both their wealth and their poverty second cities are simultaneously environmentally destructive and yet promise sustainability third cities encourage rule by political machines and oligarchies even as they are essentially democratic and at least nominally open to all and fourth city life promotes tolerance among disparate groups even as the friction among them often erupts into violence beauregard offers no simple solutions or proposed remedies for these contradictions indeed he doesn't necessarily hold that they need to be resolved since they are generative of city life without these four tensions cities wouldn't be cities rather beauregard argues that only by recognizing these ambiguities and contradictions can we even begin to understand our moral obligations as well as the clearest paths toward equality justice and peace in urban settings

the most successful urban communities are very often those that are the most diverse in terms of income age family structure and ethnicity and yet poor urban design and planning can stifle the very diversity that makes communities successful just as poor urban design can lead to sterile monoculture successful planning can support the conditions needed for diverse communities this new edition addresses the physical requirements of socially diverse neighborhoods using the city of chicago and its surrounding suburban areas as a case study the authors investigate whether social diversity is related to particular patterns and structures found within the urban built environment design for social diversity provides urban designers and architects with design strategies and tools to ensure that their work sustains and nurtures social diversity
