essay from the year 2010 in the subject business economics business management corporate governance grade 2 0 university of newcastle course managing the organisation language english abstract when frederick winslow taylor established his theory of scientific management in the late nineteenth century its system promised a revolution of the labor market business was received and successfully transferred of many immediately especially in the automotive industry by ford at the beginning of the 20th century in the second half of this century however it became increasingly criticised by taylorism due to it lacking flexibility and inhumanity thereupon more modern operational rationalisation methods were developed that wanted to drop themselves of taylorism nevertheless the essay will show that academic and managerial interests in scientific management have not declined since taylor proposed them this may attest a kind of reference for him being one of the foundation fathers of management studies roper 1999

it seems at first glance like an obvious step to take to improve industrial productivity one should simply watch workers at work in order to learn how they actually do their jobs but american engineer frederick winslow taylor 1856 1915 broke new ground with this 1919 essay in which he applied the rigors of scientific observation to such labor as shoveling and bricklayer in order to streamline their work and bring a sense of logic and practicality to the management of that work this highly influential book must reading for anyone seeking to understand modern management practices puts lie to such misconceptions that making industrial processes more efficient increases unemployment and that shorter workdays decrease productivity and it laid the foundations for the discipline of management to be studied taught and applied with methodical precision
