there are more things in heaven and earth horatio than are dreamt of in your philosophy hamlet there exists a fairly large number of textbooks concerned with spectrochemical analysis most of them deal with practical applications and instrumental factors and provide the reader with the knowledge indispensable for conducting analyses with the help of emission spectra practical knowledge and experience are indeed important requisites for success fully exploiting the spectrochemical method in the field of analytical chemistry as the method is essentially empirical it is in principle a simple one provided that we succeed in exciting all samples in an identical manner for then relative intensities of spectral lines can serve as the weights by which to measure amounts of elements however creating the required constancy of excitation conditions is hampered by the very nature of the sample whose composition profoundly influences the excitation

characteristics of the light source therefore spectrochemists are inevitably engaged in all the processes that determine the radiation output of the light source for a given sample dealing with this ensemble of processes that is with excitation in the widest sense is the object of this book of 1 1 the reader will seek in vain for enumerations of practical rules that would tell him how to tackle a particular analysis problem
