paradoxes have become characteristic of the world we live in poverty and privilege
empire and oppression migration and enclaves seeking war and peace justice and

injustice reconciliation and revenge during the 2016 *societas homiletica* annual conference held in south africa these paradoxes served as a rediscovery of the calling of preachers to deliver the promise that lies within life s contradictions a divine promise brought forth by the grace of god and the gospel of christ embodied in and through us by the spirit of christ this promise may take many forms and calls for discernment and often interrupts the status quo in surprising shocking ways it is a promise that interrupts in order to comfort

why do reasonable people lead their nations into the tremendously destructive traps of international conflict why do nations then deepen their involvement and make it harder to escape from these traps in paradoxes of war originally published in 1990 zeev maoz addresses these and other paradoxical questions about the war process using a unique approach to the study of war he demonstrates that wars may often break out because states wish to prevent them and continue despite the desperate efforts of the combatants to end them paradoxes of war is organized around the various stages of war the first part discusses the causes of war the second the management of war and the third the short and long term implications of war in each chapter maoz explores a different paradox as a contradiction between reasonable expectations and the outcomes of motivated behaviour based on those expectations he documents these paradoxes in twentieth century wars including the korean war the six day war and the vietnam war maoz then invokes cognitive and rational choice theories to explain why these paradoxes arise paradoxes of war is essential reading for students and scholars of international politics war and peace studies international relations theory and political science in general

in the 5th century bc zeno of elea propounded four arguments about motion

leading to paradoxical propositions that a finite distance cannot be traversed by a moving object that a faster runner cannot overtake a slower one that an arrow flight is at rest that half a given time is equal to the whole these paradoxes were intended as support for the doctrine of parmenides that all apparent motion is illusory and of the attempts that have been made to show wherein they are fallacious none has met with universal acceptance in this work solutions are suggested for the first three paradoxes there is an exposition of the atomic theory of space and time which has been thought to underlie the fourth and attempts which some commentators have made to explain the fourth on that basis are examined

driving human reason too far in the analysis of deep problems often leads to irresolvable inconsistencies and contradictions in this 2002 j f lewis award winning monograph gunther stent traces the origins and development of the paradoxes of free will in this well crafted introduction to philosophical debates regarding freedom of will free will poses one of the oldest and most vexatious philosophical problems dating back to the beginnings of moral philosophy in ancient greece pure theoretical reason implies that our actions are determined while practical theoretical reason tells us that our will is free stent examines the arguments of moral responsibility versus determinism from socrates plato and aristotle to immanuel kant niels bohr and max planck

zeno of elea a philosopher from ancient greece is best known for his paradoxes which have intrigued thinkers for over two millennia these paradoxes particularly those dealing with motion challenge fundamental concepts of space time and the nature of infinity while zeno s ideas emerged within the context of ancient philosophical debates their relevance persists today in various fields of study from physics to mathematics and philosophy one of the most striking aspects of zeno s paradoxes is their ability to question assumptions that many take for granted the paradox of achilles and the tortoise for example suggests that a faster runner achilles could never overtake a slower one the tortoise if the tortoise has a head start at first glance this seems absurd as we know that achilles would inevitably pass the tortoise in a real race however zeno s argument raises deeper questions about how we understand infinite divisions in space and time today this paradox invites reflection on the nature of infinity a concept that remains central in modern mathematics and the study of calculus zeno s paradoxes also raise critical questions about the nature of motion itself his arrow paradox for instance claims that an

arrow in flight is always at rest at any given moment in time suggesting that motion is an illusion while this may seem like a mere abstract thought experiment it has significant implications for how we perceive the passage of time and the continuum of motion in modern physics the concept of time and motion is constantly reexamined especially in the context of relativity theory where time can bend and stretch depending on an object's velocity and position in space zeno's paradoxes thus offer an early philosophical precursor to these scientific discussions
