with three hearts and blue blood its gelatinous body unconstrained by jointed limbs or gravity the octopus seems to be an alien an inhabitant of another world it's baggy boneless body sprouts eight arms covered with thousands of suckers suckers that can taste as well as feel the octopus also has the powers of a superhero it can shape shift change color squirt ink pour itself through the tiniest of openings or jet away through the sea faster than a swimmer can follow but most intriguing of all octopuses classed as mollusks like clams are remarkably intelligent with quirky personalities this book an inquiry into the mind of an intelligent invertebrate is also a foray into our own unexplored planet these thinking feeling creatures can help readers experience and understand our world and perhaps even life itself in a new way

between the organ systems of cephalopods and those of less ambitious molluscs octopus does as we would predict live close to the limits set by its own physiology the circulation to take one example is barely adequate for such an active animal mainly because of the absence of any system for pack aging the blood pigment haemocyanin in solution is a poor oxygen carrier cephalopod blood can transport less than 5 millilitres of oxygen per 100 ml of blood compared with about 15 vol in fish and the whole supercharged system of triple hearts high blood pressure and pulsating blood vessels succeeds only in returning blood that retains less than 30 of its dissolved oxygen by the time it reaches the gills this at rest the effect of exercise is immediate and surprisingly long lasting even in octopuses as small as 300 g which must very swiftly run into oxygen debt when they flee from predators or pursue their prey sections 3 2 2 3 2 4 digestion too would seem to be limiting as with other molluscs digestion in octopus is based on secretion absorption cycles by a massive diverticulum of the gut an adequate system in a less hectic past but scarcely appropriate in a predator that must be an opportunist in the matter of feeding octopus feeds mainly at night and spends a great deal of every day sitting at home

the visually arresting and often misunderstood octopus has long captured popular imagination with an alien appearance and an uncanny intellect this exceptional sea creature has inspired fear in famous lore and legends from the giant octopus attack in 20 000 yet its true nature is more wondrous still after decades of research the authors reveal a sensitive curious and playful animal with remarkable intelligence an ability to defend itself with camouflage and jet propulsion an intricate nervous system and advanced problem solving abilities
