this book is addressed to people with research interests in the nature of mathematical thinking at any level to people with an interest in higher order thinking skills in any domain and to all mathematics teachers the focal point of the book is a framework for the analysis of complex problem solving behavior that framework is presented in part one which consists of chapters 1 through 5 it describes four qualitatively different aspects of complex intellectual activity cognitive resources the body of facts and procedures at one's disposal heuristics rules of thumb for making progress in difficult situations control having to do with the efficiency with which individuals utilize the knowledge at their disposal and belief systems one's perspectives regarding the nature of a discipline and how one goes about working in it part two of the book consisting of chapters 6 through 10 presents a series of empirical studies that flesh out the analytical

framework these studies document the ways that competent problem solvers make the most of the knowledge at their disposal they include observations of students indicating some typical roadblocks to success data taken from students before and after a series of intensive problem solving courses document the kinds of learning that can result from carefully designed instruction finally observations made in typical high school classrooms serve to indicate some of the sources of students often counterproductive mathematical behavior

recent research in problem solving has shifted its focus to actual classroom implementation and what is really going on during problem solving when it is used regularly in classroom this book seeks to stay on top of that trend by approaching diverse aspects of current problem solving research covering three broad themes firstly it explores the role of teachers in problem solving classrooms and their professional development moving onto secondly the role of students when solving problems with particular consideration of factors like group work discussion role of students in discussions and the effect of students engagement on their self perception and their view of mathematics finally the book considers the question of problem solving in mathematics instruction as it overlaps with problem design problem solving situations and actual classroom implementation the volume brings together diverse contributors from a variety of countries and with wide and varied experiences combining the voices of leading and developing researchers the book will be of interest to any reader keeping on the frontiers of research in problem solving more specifically researchers and graduate students in mathematics education researchers in problem solving as well as teachers and practitioners

this book aims at improving the mathematical modelling skills of users by enhancing the ability to understand connect apply and use the mathematical concepts to the problem at hand this book provides the readers with an in depth knowledge of the various categories classes of research problems that professionals researchers and students might encounter following which the applications of appropriate mathematical models is explained with the help of case studies the book is targeted at academicians researchers students and professionals who belong to all engineering disciplines

the central theme of this book is the search for solutions to eigenvalue problems that satisfy additional equations in the spectral parameter for example pairs of eigenvalue equations this problem which looks very simple at first has turned out to be both deep and difficult moreover this concept of bispectrality has been shown to be useful in many active areas of current research in mathematics and physics

problems are a central part of human life the psychology of problem solving organizes in one volume much of what psychologists know about problem solving and the factors that contribute to its success or failure there are chapters by leading experts in this field including miriam bassok randall engle anders ericsson arthur graesser keith stanovich norbert schwarz and barry zimmerman among others the psychology of problem solving is divided into four parts following an introduction that reviews the nature of problems and the history and methods of the field part ii focuses on individual differences in and the influence of the abilities and skills that humans bring to problem situations part iii examines motivational and emotional states and cognitive strategies that influence problem solving performance while part iv summarizes and integrates the various views of problem solving proposed in the preceding chapters
