this book introduces and explains the concept of military legalism and analyzes its importance for us military decision making the book documents a change over the past 50 years in the way in which us military officers make decisions about using force which it calls military legalism rather than relying solely on professional military judgment and professional military ethics officers are increasingly using legal norms and reasoning to justify their choices this book explores how widespread this practice has become explains why it has emerged and examines some of its implications using historical cases from world war ii through the opening days of operation iraqi freedom the book traces changes in the way in which civilian policymakers have governed us military decisions about the use of force and how the military has responded to these changes while military legalism is normatively neither good nor bad legalistic reasoning has been used to justify morally deficient policies and a reliance on legal reasoning may have unanticipated and unexamined effects on the norms of civil military relations this book will be of interest to students of law military studies ethics and international relations

this book has two interlocking ambitions the first is to steer what we purposefully call the idioms of critical philosophy towards a more ecologically informed paradigm the second is to recognise that what has rightly come to be called the anthropocene extinction is not and cannot be treated as simply a scientific fact but rather a socio political and ecological dispute of immense complexity we start with an exploration of the consequences of a critical tradition which under the name enlightenment has placed humanity at its centre and chance as its most general and problematic characteristic we argue that this leads to a schizophrenic relationship between radical critique and science which can be avoided if we take the implications of biosemiotics seriously and develop a new ecologically informed social science we argue that in practice this means that for science to be practical in addressing the anthropocene extinction we have to recognise that it operates in a historically emergent highly differentiated technopolitical ecology science as it is currently commonly understood and used is not ecological enough this book will interest social scientists interested in not only describing and critiquing but also understanding and responding to the complex problems facing humanity scientists wanting to make sense of social phenomena those educating the next generation of social scientists and climate activists and policy makers
