volume 6 ionization methods captures the story of molecular ionization and its phenomenal evolution that makes mass spectrometry the powerful method it is today

chapters 1 and 2 cover fundamentals and various issues that are common to all ionization e.g. accurate mass, isotope clusters and derivatization. Chapters 3–9 acknowledge that some ionization methods are appropriate for gas phase molecules and others for molecules that are in the solid or liquid states. Chapters 3–6 cover gas phase molecules, dividing the subject into: 1. ionization of gas phase molecules by particles e.g. ei ; 2. ionization by photons; 3. ionization by ion molecule and molecule molecule reactions e.g. $apci$ and $dart$; and ionization in strong electric fields i.e. electrohydrodynamic and field ionization. Desorption ionization in a strong electric field illustrates the transition to ionization of molecules in the solid or liquid states covered in chapters 7–9. 1. spray methods for ionization e.g. electrospray; 2. desorption ionization by particle bombardment e.g. fab ; and 3. desorption by photons e.g. $maldi$. Electrospray and $maldi$ also lead to applications in biophysical chemistry. The theme of chapter 10, chapter 11 reconsiders ionization from the view of choosing an ionization method. The range of subjects is from ionization of organic and biomolecules to the study of microorganisms.
