comprehensive introduction to the theory of algebraic group schemes over fields based on modern algebraic geometry with few prerequisites

this book is a revised and enlarged edition of linear algebraic groups published by w a benjamin in 1969 the text of the first edition has been corrected and revised accordingly this book presents foundational material on algebraic groups lie algebras transformation spaces and quotient spaces after establishing these basic topics the text then turns to solvable groups general properties of linear algebraic groups and chevalley's structure theory of reductive groups over algebraically closed groundfields the remainder of the book is devoted to rationality questions over non algebraically closed fields this second edition has been expanded to include material on central isogenies and the structure of the group of rational points of an isotropic reductive group the main prerequisite is some familiarity with algebraic geometry the main notions and results needed are summarized in a chapter with references and brief proofs

it has been nearly twenty years since the first edition of this work in the intervening years there has been immense progress in the use of homological algebra to construct admissible representations and in the study of arithmetic groups this second edition is a corrected and expanded version of the original which was an important catalyst in the expansion of the field besides the fundamental material on cohomology and discrete subgroups present in the first edition this edition also contains expositions of some of the most important developments of the last two decades
