ce livre constitue un exposé taillé de la série de cours donnés en 2020 par le prof nicolas bergeron titulaire de la
chaire aisenstadt au crm de montral l'objet de ce texte est une ample généralisation d'une famille d'identités
classiques notamment la formule d'addition de la fonction cotangente ou celle des séries d'eisenstein le livre
relie ces identités la cohomologie de certains sous-groupes arithmétiques du groupe linéaire général il rend
explicite ces relations au moyen de la théorie des symboles modulaires de rang supérieur dévoilant finalement
un lien concret entre des objets de nature topologique et algébrique this book provides a detailed exposition of
the material presented in a series of lectures given in 2020 by prof nicolas bergeron while he held the
aisenstadt chair at the crm in montral the topic is a broad generalization of certain classical identities such as
the addition formulas for the cotangent function and for eisenstein series the book relates these identities to
the cohomology of arithmetic subgroups of the general linear group it shows that the relations can be made
explicit using the theory of higher rank modular symbols ultimately unveiling a concrete link between
topological and algebraic objects i think that the text cocycles de groupe pour gl_n et arrangements d'
hyperplans is terrific i like how it begins in a leisurely enticing way with an elementary example that neatly
gets to the topic the construction of these meromorphic function valued modular symbols are fundamental
objects and play and will continue to play an important role barry mazur harvard university
