this lab manual is appropriate for any introduction to
programming course that uses the java programming language its
hands on exercises are intended to help students improve their
understanding of the fundamental structures in java the order of
the topics in this manual reflects an objects first approach
with the goal of helping students understand the object oriented
paradigm this manual is divided into three parts the first part
presents the core of the java language these six sessions
provide experience with core features and principles of the java
programming language they provide enough breadth and depth for
readers to learn more of java on their own or in later courses
the second part of the manual helps students explore issues
pertaining to algorithms recursion is considered here as well

important searching algorithms finally methods of algorithm analysis are examined the final part of the manual covers a number of additional topics that are not described in the core sessions such as graphics inheritance and object design features includes eighteen laboratories each with introductory material new skills that students will develop in the exercise prerequisite skills to ensure students are prepared for the session required files to use modify and extend in the exercises discussion of topics covered in the laboratory session experiments to reinforce the discussion post laboratory problems to enhance understanding notes on selected problems focuses on applications but includes optional material on applets provides an objects first approach to working with java written on the java 2 platform designed to work with any java textbook 0201612674b04062001

labs extend the hands on section in each chapter of the text with author developed java 2 compatible programming exercises

extensively revised the new second edition of programming and problem solving with java continues to be the most student friendly text available the authors carefully broke the text into smaller more manageable pieces by reorganizing chapters allowing student to focus more sharply on the important information at hand using dale and weems highly effective progressive objects approach students begin with very simple yet useful class design in parallel with the introduction of java s basic data types arithmetic operations control structures and file i o students see first hand how the library of objects steadily grows larger enabling ever more sophisticated applications to be developed through reuse later chapters focus on inheritance and polymorphism using the firm foundation that has been established by steadily developing numerous classes in the early part of the text a new chapter on data structures and collections has been added making the text ideal for a one or two semester course with its numerous new case studies end of chapter material and clear descriptive examples the second edition is an exceptional text for discovering java as a first programming language

with lab exercises covering important topics in all 12 chapters this lab manual will accompany the fifth edition of the lewis and loftus java software solutions the exercises provide hands on experience with programming concepts introduced in an introductory programming course manual solutions and source code are available online

uses a series of engaging and realistic samples programs provided to the student on the accompanying disk each lab explores one or more of these java programs in a set of exercises in analysis experimentation coding and testing the

manual makes java and the concepts of object oriented programming understandable and meaningful to students with no prior programming experience
