offers instruction in manufacturing engineering management strategies to help the student optimize future manufacturing processes and procedures this edition includes innovations that have changed management s approach toward the uses of manufacturing engineering within the business continuum

the technology of cad cam cim deals with the creation of information at different stages from design to marketing and integration of information and its effective communication among the various activities like design product data management process planning production planning and control manufacturing inspection materials handling etc which are individually carried out through computer software seamless transfer of information from one application to another is what is aimed at this book gives a detailed account of the various technologies which form computer based automation of manufacturing activities the issues pertaining to geometric model creation standardisation of graphics data communication manufacturing information creation and manufacturing control have been adequately dealt with principles of concurrent engineering have been explained and latest software in the various application areas have been introduced the book is written with two objectives to serve as a textbook for students studying cad cam cim and as a reference book for professional engineers

this report provides an assessment of technology used in manufacturing modular homes in the united states and that used in the german prefabricated wooden home industry it is the first step toward identifying the research needs in automation and manufacturing methods that will facilitate mass customization in the home manufacturing industry within the united states a relatively low level of technology was found in domestic modular home manufacturers raw material transportation was mostly manual manually operated saws sized raw materials cranes were used to move subassemblies and modules were pushed by hand or with a battery powered pusher german prefabricated home manufacturers used closed panels to construct walls roofs and floors rather than modular construction three levels of automation were identified manual semi automated and fully automated manual production methods were similar to those found in the united states in semi automated factories automated machinery was used but an operator was required to manually load unload and start the machine the fully automated factories had equipment capable of machining and transferring panel components and placing and fastening components together such investment in automation is risky in the cyclic housing industry the modular factory has elevated homebuilding from a craft to mass production but flexibility is reduced and significant customization is difficult future research should examine the cost effectiveness of using high levels of automation software and equipment in the u s homebuilding industry and whether it can profitably provide the manufacturing flexibility for mass customization alternatively the use of lean manufacturing in modular home factories to realize the same benefits needs to be examined
