event based systems are a class of reactive systems deployed in a wide spectrum of engineering disciplines including control communication signal processing and electronic instrumentation activities in event based systems are triggered in response to events usually representing a significant change of the state of controlled or monitored physical variables event based systems adopt a model of calls for resources only if it is necessary and therefore they are characterized by efficient utilization of communication bandwidth computation capability and energy budget currently the economical use of constrained technical resources is a critical issue in various application domains because many systems become increasingly networked
