sandu daniel kopp investigates whether carbon reduction targets are compatible with market driven competition in gas and power

industries and whether security of supply is compatible with competitive markets he examines the policy trade offs which need to be made between the three different elements and whether these policy judgements should be economically or politically based the analysis shows the need for a complex set of politically determined options to protect competitive markets from price risks and emergency events and demonstrates that this has thus far failed the policy test overall the author argues that the three major elements of eu energy policy are incompatible in important respects and thereby challenges much of the conventional wisdom of eu and member state policies of the past decade

america s government intervenes in almost every aspect of its citizens daily lives from the air we breathe to our health wealth and security americans wade through a vast political ocean unfortunately we do so blindly few americans understand how or why our government regulates the market mechanisms that surround us in markets and majorities steven sheffrin addresses essential yet overlooked questions about political intervention in economic spheres why should we trust the government to clean our air how do we know what to define as clean what kind of health insurance business will the government run what are the dangers of publicly financed doctors sheffrin first explains traditional theories of market failure used to justify intervention he then combines the crucial question of political viability with the fascinating particulars of policy histories sheffrin applies such analysis to the areas of health care social security environmental policy product liability trade policy and fiscal and budgetary policy he argues that beneath each area lies a unique calculus of market failure and political pressures and convincingly demonstrates that no single policy can be understood out of economic and political context in short the fact that markets may fail does not guarantee that politics will succeed by examining both sides of each policy area sheffrin s careful review of our national policy making reveals a minefield where in many cases politics cannot help but fail as badly as markets however he shows that all is not lost citing among other examples political intervention in the medical industry as the only hope of stopping hospitals from competitive purchases of useless technology markets and majorities is must reading for anyone who has ever wondered why government just can t seem to get things done as well as anyone who has asked why it should try in the first place

how do poor nations become rich industrialized and democratic and what role does democracy play in this transition to address these questions jongryn mo and barry r weingast study south korea s remarkable transformation since 1960 the authors concentrate on three

critical turning points park chung hee s creation of the development state beginning in the early 1960s democratization in 1987 and the genesis of and reaction to the 1997 economic crisis at each turning point korea took a significant step toward creating an open access social order the dynamics of this transition hinge on the inclusion of a wide array of citizens rather than just a narrow elite in economic and political activities and organizations the political economy systems that followed each of the first two turning points lacked balance in the degree of political and economic openness and did not last the korean experience therefore suggests that a society lacking balance cannot sustain development korean political and economic development offers a new view of how korea was able to maintain a pro development state with sustained growth by resolving repeated crises in favor of rebalancing and greater political and economic openness

which political and institutional factors trigger reforms that enable the poor to benefit from the process of economic growth how can the incentives of policy makers be influenced in order to achieve such a dynamic these are the questions this study seeks to address by examining the transition process in post communist countries the author argues that political competition within an accepted and respected institutional environment has been a driving force in shaping the direction and success of transition reforms evidence shows that in countries with a sufficient degree of political competition citizens responded to economic crises by calling for economic liberalization economic liberalization removed existing distortions increased economic efficiency and raised public welfare this activated a dynamic self enforcing reform process that also strengthened the political and economic power of the poor in the absence of political competition such a process failed to emerge thereby contributing to the persistence of poverty based on these findings there is good reason to postulate that some level of political competition is essential for transition reforms to improve economic efficiency and public welfare in a sustainable manner

this book covers three aspects of the study of international economics pure theory of trade trade policy and theory of balance of payment and exchange rate

events of the 1970s and 1980s have provoked intense controversy about the desirability of existing political and economic institutions on the basis of an analysis of social welfare in varying types of market systems and in certain democratic political systems democracy and markets illuminates alternative directions for institutional reform examining in detail the experiences of several democratic european countries john r freeman considers whether a mixed ownership structure is preferable to a private ownership structure and whether a

pluralist type of democratic politics is preferable to a corporatist type freeman compares the benefits of the two economic and two political systems separately and then analyzes the workings of four basic political economies this analysis yields a welfare taxonomy for alternative forms of democratic capitalism and more specifically a characterization of the blends of collective gain and distributional equity that can be achieved in the four systems freeman demonstrates the validity of this taxonomy through an empirical investigation of the political economies of britain austria sweden and italy under current conditions he concludes the corporatist mixed system produces the most desirable blend of welfare outcomes
