this volume is a record of the proceedings of the symposium on statistical energy analysis sea held at the university of southampton in july 1997 which was held under the auspices of the international union of theoretical and applied mechanics theoretical sea is form of modelling the vibrational and acoustical behaviour of complex mechanical systems which has undergone a long

period of gestation before recent maturation into a widely used engineering design and analysis tool which is supported by a rapidly growing supply of commercial software sea also provides a framework for associated experimental measurement procedures data analysis and interpretation under the guidance of the members of a distinguished international scientific committee participants were individually invited from the broad spectrum of seafarers including academics consultants industrial engineers software developers and research students the symposium aimed to reflect the balance of world wide activity in sea although some eminent members of the sea community were sadly unable to attend in particular professor richard lyon and dr gideon maidanik two of the principal originators of sea were sorely missed this publication contains copies of all the papers presented to the symposium together with a summary of the associated discussions which contains valuable comments upon the contents of the formal papers together with the views of participants on some fundamental issues which remain to be resolved

this book brings together contributions from some 200 scientists from more than 20 countries who present and discuss the latest scientific research developments on this topic it is organized around the general themes of relations between scales and long term morphodynamics such as biogeomorphology small scale processes and grain sorting morphodynamic free behavior human interferences in morphodynamics the book provides an excellent overview of the state of the art knowledge on river coastal and estuarine morphodynamics and will be of interest to academics engineers planners national and local authorities and all those involved in managing river estuarine and coastal habitats

addresses fundamentals and advanced topics relevant to the behavior of materials under in service conditions such as impact shock stress and high strain rate deformations deals extensively with materials from a microstructure perspective which is the future direction of research today
