it is evident that for a number of ecological and technical problems in rivers and lakes a better knowledge of sediment transport and sedimentation is needed together with the ability to predict and simulate sediment behaviour on the other hand a stagnation of research in these topics could be observed in the last decades at the symposium an attempt was made to present new results in mathematics and natural sciences relevant for the sediment problem new strategies were discussed to tackle the complexity of the problem basic theoretical research and laboratory experiments alone are incomplete without a feedback from field observations and measurements for that reason well

known researchers from both basic and engineering sciences were invited turbulence non local phenomena stability interaction feedback systems self organization two phase flow and chaotic processes numerical simulations as well as measurement techniques and field results were the keywords of the symposium this proceedings are a good source for those interested in the state of the art
