deep learning in introductory physics explores how students learn physics in a model centered classroom it addresses the coherence vs fragmentation debate and suggests that deep science learning is regressive and revolutionary

key features organizes a difficult subject into short and clearly written sections can be used alongside any introductory physics textbook presents clear examples for every problem type discussed in the textbook

this book grew out of an ongoing effort to modernize college university's three term introductory calculus level physics course the book is for the first term of this course and is intended to help first year college students make a good transition from high school physics to university physics the book concentrates on the physics that explains why we believe that atoms exist and have the properties we ascribe to them this story line which motivates much of our professional research has helped us limit the material presented to a more humane and more realistic amount than is presented in many beginning university physics courses the theme

of atoms also supports the presentation of more non newtonian topics and ideas than is customary in the rst term of calculus level physics we think it is important and desirable to introduce students sooner than usual to some of the major ideas that shape contemporary physicists views of the nature and behavior of matter here in the second decade of the twenty rst century such a goal seems particularly appropriate the quantum nature of atoms and light and the mysteries associated with quantum behavior clearly interest our students by adding and phasizing more modern content we seek not only to present some of the physics that engages contemporary physicists but also to attract students to take more physics only a few of our beginning physics students come to us sharply focused on physics or astronomy nearly all of them h ever have taken physics in high school and found it interesting

introductory physics goes beyond a typical introductory text by assuming a basic understanding among readers and engaging them in dialogue about their own prior conceptions and strategies
