universe from the big bang through the present moment thomas lovejoy university professor in environmental science and policy george mason university through the astonishing combined achievements of natural scientists worldwide we now have a detailed account of how galaxies and stars planets and living organisms human beings and human consciousness came to be and yet we thirst for answers to questions that have haunted humanity from the very beginning what is our place in the 14 billion year history of the universe what roles do we play in earth s history how do we connect with the intricate web of life on earth in journey of the universe brian thomas swimme and mary evelyn tucker tell the epic story of the universe from an inspired new perspective weaving the findings of modern science together with enduring wisdom found in the humanistic traditions of the west china india and indigenous peoples the authors explore cosmic evolution as a profoundly wondrous process based on creativity connection and interdependence and they envision an unprecedented opportunity for the world s people to address the daunting ecological and social challenges of our times journey of the universe transforms how we understand our origins and envision our future though a little book it tells a big story one that inspires hope for a way in which earth and its human civilizations could flourish together what s most striking about swimme and tucker s work is a simple but beautiful assumption a cosmological orientation opens the human mind to wonder gratitude humility and creativity orion

a leading cosmologist explains our current understanding of space and time there was immense excitement in the scientific community and among the general public when the cobe space probe sent back data that proved not only that the big bang had happened but also that it had happened at more or less exactly the time that astronomers had calculated barrow describes these finds and then goes on to explain how they allow us to reach back and shed light upon events at the dawn of time what does it mean to say that the universe appeared out of nothing did it need a beginning and will it ever end why do we think that most of the universe is invisible the ideas that cosmologists are wrestling with are challenging and extraordinary here they are explained with unfailing fluency

the study of the origin and evolution of the universe encompasses many of the most fascinating

questions in science what is our place in the universe how did everything in it get started from galaxies and stars to planets and people and what does the future hold for our star and our universe recently scientists have made remarkable advances in providing concrete answers to these profound questions the new technologies of observational astronomy with its ground and space based gamma ray x ray ultraviolet infrared and radio telescopes is truly producing a new golden age of discovery this book presents the excitement of these new discoveries in the larger context of cosmic evolution the distinguished contributors are leading researchers at the cutting edge of these fields and they also excel in explaining these subjects to the broader public they offer the latest insights into these rapidly advancing fields covering the origin and evolution of the universe the chemical elements galaxies the evolution of stars planets and biological life essential physical concepts are clearly and carefully explained at the introductory college level related concepts from chemistry geology and biology are organized and integrated into the discussions an extensive glossary is provided and mathematical detail has been deliberately kept simple to make the chapters accessible to anyone with an appreciation of science the result is stimulating exploration of the frontiers of modern science that will intrigue both amateurs and professionals

the nature of the universe containing an early use of the big bang expression is derived from a series of radio broadcast lectures on astronomy for the bbc

the future of the expanding cosmos is the twenty third instalment in the little blue book series and comprises of discourse thirty nine of the monodoxy which is itself the first disquisition of the omnidoxy the founding treatise of astronism this single discourse publication introduces the discipline of cosmontology known as omnology which deals with all theories concepts and beliefs regarding the nature form purpose and eventualities of the expansion of the cosmos the little blue book series was created and first published by cometan himself as a way to simplify and commercialise the immensity of the two million word length of the omnidoxy into smaller more bite size publications a successful series from its very first published entry the little blue book series has gone on to become a symbol of astronist commercial literature and a way for cometan's words to reach readers of all ages and

abilities who remain daunted by the beauty and yet the sheer extensiveness of the omnidoxy as the longest religious text in history

the structure of the universe by paul halpern ph d originally published in 1996 is a tour of the knowledge of the deep reaches of space and predictions for its future technological marvels such as the hubble space telescope are revealing a wealth of information about the deepest reaches of space after decades of research scientists now believe they are closer to discovering the missing matter the invisible stuff left over from the big bang that will determine the ultimate fate of the universe with each discovery new light is shed on scores of old questions and at the same time new questions arise

this book critically explores answers to the big question what produced our universe around fifteen billion years ago in a big bang it critiques contemporary atheistic cosmologies incl steady state oscillationism big fizz that affirm the eternity self sufficiency of the universe without god it defends and revises process theology and arguments for god s existence from the universe s life supporting order contingent existence

an accessible look at the mysteries that lurk at the edge of the known universe and beyond the observable universe the part we can see with telescopes is incredibly vast yet recent theories suggest that there is far more to the universe than what our instruments record in fact it could be infinite colossal flows of galaxies large empty regions called voids and other unexplained phenomena offer clues that our own bubble universe could be part of a greater realm called the multiverse how big is the observable universe what it is made of what lies beyond it was there a time before the big bang could space have unseen dimensions in this book physicist and science writer paul halpern explains what we know and what we hope to soon find out about our extraordinary cosmos explains what we know about the big bang the accelerating universe dark energy dark flow and dark matter to examine some of the theories about the content of the universe and why its edge is getting farther away from us faster explores the idea that the observable universe could be a hologram and that

everything that happens within it might be written on its edge written by physicist and popular science writer paul halpern whose other books include collider the search for the world's smallest particles and what science ever done for us what the simpsons can teach us about physics robots life and the universe

the asymmetry of natural phenomena under time reversal is striking here zehinvestigates the most important classes of physical phenomena that characterize the arrow of time discussing their interrelations as well as striving to uncover a cosmological common root of the phenomena such as the time independent wave function of the universe the description of irreversible phenomena is shown to be fundamentally observer related both physicists and philosophers of science who reviewed the first edition considered this book a magnificent survey a concise technically sophisticated up to date discussion of the subject showing fine sensitivity to some of the crucial philosophical subtleties this new and expanded edition will be welcomed by both students and specialists

why believe provides accessible explanations of several core concerns of apologetics from arguments for the existence of god and the validity of christ's resurrection to common questions about the practice of faith

essential guide to astrophysics is perfect for anyone who has ever looked up at the night sky and wondered about the universe written clearly and engagingly it covers the basics of astrophysics from the history of the field to cutting edge research we start with telescopes and other tools astronomers use to study the universe then dive into stars their life cycles how they produce energy and what happens when they die galaxies are another major topic including our milky way and other types found throughout the universe the book explores the big bang theory dark matter dark energy and the ultimate fate of the universe the search for life beyond earth is also covered including finding exoplanets and conditions necessary for life we explore our solar system including the sun planets moons and other objects essential guide to astrophysics tackles complex topics like black holes

gravitational waves and the future of space exploration with helpful appendices explaining any math or unfamiliar terms if you've ever been curious about the universe essential guide to astrophysics is a great place to start

the story of our universe from its beginning in the first milliseconds of the big bang up to our present moment and beyond told in a gripping narrative by one of the world's leading astronomers everyone knows astronomers use telescopes to peer into distant space but did you know that they also use them as time machines to look back into the past in this fascinating and original book world renowned astronomer paul murdin lays out the entire history of the universe from here on earth into the distance leading us step by step through the history of time and space our knowledge of the universe is greater than ever thanks to cutting edge scientific research as well as a new age of space exploration and discovery and murdin has been at the forefront of this inquiry he was the first person to identify a black hole in the universe murdin draws on his expertise in the field to explain difficult concepts such as black holes nebulae and dark matter and relates them to the most important characters and events in the history of our universe powerful explosions the largest planets galaxies and celestial bodies structured in a clear accessible fashion as a biography of our universe this history begins at the big bang and proceeds stage by stage through the story of our cosmos full of fascinating details about our own existence for instance that two thirds of the atoms in our body are hydrogen atoms formed in the first few minutes of the big bang and that we are a by product of the manufacture of galaxies and stars this volume offers a glimpse into the future of our universe and what it means to us all
