this book examines the challenge of accelerating automation and argues that countering and adapting to this challenge requires new methodological philosophical scientific sociological economic ethical and political perspectives that fundamentally rethink the categories of work and education what is required is political will and social vision to respond to the question what is the role of education in a digital age characterized by potential mass technological unemployment today s technologies are beginning to cost more jobs than they create and this trend will continue there have been many proposed solutions to this problem and they invariably involve an educational vision yet in a world that simply doesn t offer enough work for everyone education is clearly not a panacea for technological unemployment this collection presents responses to this question from a wide spectrum of disciplines including but not limited to education studies philosophy history politics sociology psychology and economics

highlights the latest scientific and technological advances from inventions and discoveries to a history of technology

transcript of lectures

now thoroughly revised and updated the book discusses recent breakthroughs in media technology including such exciting advances as video discs and cassettes two way television satellites cable and much more

once patronized primarily by the counterculture and the health food establishment the organic food industry today is a multi billion dollar business driven by ever growing consumer demand for safe food and greater public awareness of ecological issues assumed by many to be a recent phenomenon that industry owes much to agricultural innovations that go back to the dust bowl era this book explores the roots and branches of alternative agricultural ideas in twentieth century america showing how ecological thought has challenged and changed agricultural theory practice and policy from the 1930s to the present it introduces us to the people and institutions who forged alternatives to industrialized agriculture through a deep concern for the enduring fertility of the soil a passionate commitment to human health and a strong advocacy of economic justice for farmers randal beeman and james pritchard show that agricultural issues were central to the rise of the

environmental movement in the united states as family farms failed during the depression a new kind of agriculture was championed based on the holistic approach taught by the emerging science of ecology ecology influenced the permanent agriculture movement that advocated such radical concepts as long term land use planning comprehensive soil conservation and organic farming then in the 1970s sustainable agriculture combined many of these ideas with new concerns about misguided technology and an over consumptive culture to preach a more sensible approach to farming in chronicling the overlooked history of alternative agriculture a green and permanent land records the significant contributions of individuals like rex tugwell hugh bennett louis bromfield edward faulkner russell and kate lord scott and helen nearing robert rodale wes jackson and groups like friends of the land and the practical farmers of iowa and by demonstrating how agriculture also remains central to the public interest especially in the face of climatic crises genetically altered crops and questionable uses of pesticides this book puts these issues in historical perspective and offers readers considerable food for thought

a leading technology expert examines ways to manage the rapid proliferation of technology and come to grips with its pervasive influence technology always a key driver of historical change is transforming society as never before and at a far more rapid pace this book takes the reader on a journey into what the author identifies as the central organizing construct for the future of civilization the continued proliferation of technology and he challenges us to consider how to think about technology to ensure that we humans and not the products of our invention remain in control of our destinies in this informative and insightful examination dr daniel m gerstein who brings vast operational research and academic experience to the subject proposes a method for gaining a better understanding of how technology is likely to evolve in the future he identifies the attributes that a future successful technology should seek to emulate and the pitfalls that a technology developer should try to avoid the aim is to bring greater clarity to the impact of technology on individuals and society in particular he considers three technologies now converging that will shape the future biotechnology artificial intelligence and the internet of things he asks will we continue to develop new technologies in these fields merely because basic research shows that we can or should we first consider the likely effects of these technologies on the quality of life at the individual

societal and global levels dr gerstein makes a compelling case that rational and informed evolution of our technological options is the best course for ensuring a brighter future
