this work contains the proceedings of the distillation and absorption conference which happens every 5 years this collection of 100 contributions spanning 23 countries showcase the newest and best distillation and absorption technologies which cover a broad range of fundamental and applied aspects of the technology to address these aspects the contributions have been put into seven themes modelling and simulation steady state dynamic and cfd energy efficiency and sustainability equipment design and operation integrated hybrid and novel processes process troubleshooting and handling operational problems control and operation and basic data

in many fields of science and practice large amounts of data and information are collected for analyzing and visualizing latent structures as

orderings or classifications for example this volume presents refereed and revised versions of 52 papers selected from the contributions of the 16th annual conference of the german classification society the papers are organized in three major sections on data analysis and classification 1 information retrieval knowledge processing and software 2 applications and special topics 3 moreover the papers were grouped and ordered within the major sections so in the first section we find papers on classification methods fuzzy classification multidimensional scaling discriminant analysis and conceptual analysis the second section contains papers on neural networks and computational linguistics in addition to the mentioned fields an essential part of the third section attends to sequence data and tree reconstruction as well as data analysis and informatics in medicine as special topics the volume presents applications in thesauri archaeology musical science and psychometrics

the first part of the book deals with basic concepts of correspondence analysis and related methods for analyzing cross tabulations it then looks at the multivariate case when there are several variables of interest including the relationship to cluster analysis factor analysis and reliability of measurement applications to longitudinal data event history data panel data and trend data are demonstrated
