essay from the year 1994 in the subject philosophy practical ethics aesthetics culture nature right grade keine kyoto sangyo university language english abstract in his essay on the creation of art monroe beardsley probably the best known american philosopher working in the field of aesthetics is setting himself the task of inquiring into the creative process between the incept short for inceptive element and the final touch asking how the work of art itself comes into existence and takes on its character through the stages or phases of this process after an interval of more than two decades i would like to offer a few belated comments on beardsley s ideas since it seems to me that characteristic differences between american and german thought on this central issue of aesthetics can be shown by this

diploma thesis from the year 2010 in the subject business economics business management corporate governance grade 2 o university of applied sciences essen language english abstract on the one hand it is often said that the manufacturing and service companies in the industrialised countries are well organised the business processes are well managed so the companies are able to work effectively and efficiently on the other hand a lot of companies even big corporations have gone bankrupt over the last years because of their confusing and inefficient business process organisation which also led the management to take wrong decisions so how do these two statements match hence it has become more important for companies especially for those which are globally organised to focus on their business processes to either optimise or eliminate the one which adds no value in this context it is an important approach to find out in what way the most important methods of bpm bpr and six sigma can help organisations to face the challenges of today s turbulent marketplaces

seminar paper from the year 2009 in the subject business economics miscellaneous grade 1 3 otto beisheim school of management vallendar language english abstract this paper analyzes the path that brazil s economy has taken to reach today s status the status of a stable economy that shows high potential to meet the challenging expectations that economists set on it the idea is to source the roots of the economic stability and performance of latin america s largest country and to highlight the implications it will have in the near and remote future chapter 2 focuses on the real plan launched in 1994 a set of reforms which transformed brazil s economy from a protected economy facing four digit inflation rates into a stable economy capable of competing with developed economies it discusses the implementation of the real plan its measures and its positive and negative consequences for the brazilian economy furthermore we are going to deal with the recent past of brazil s economy since the presidential elections in 2002 when the leader of the workers party lula da silva was elected we focus on the economic policy of the president and its government whose election has almost led to the default of the brazilian state because financial markets were afraid that the socialist candidate would pursue a 180 degree turn compared to the neoliberal economic policy of his predecessor we analyze why brazil was one of the last countries being affected by the financial crisis and why it was one of the first to leave it behind chapter 3 analyzes on the one hand the agricultural the industrial and the service sector and on the other hand the trade and the domestic demand in brazil first of all we will clearly show the development of the three economic sectors until today and point out their influences on

each other in this context we will search for reasons for the strongly growing service sector and for the decreasing economic relevance of the agricultural and the industrial service sector but of course we cannot neglect those two sectors in the brazilian economy the fourth chapter of this paper evaluates the future potential of brazil the basis for this section is an analysis of the four conditions for growth mentioned by goldman sachs 2003

seminar paper from the year 2006 in the subject business economics economic policy grade 1 7 university of westminster university of westminster course modern business cultures in the age of globalisation language english abstract today everybody talks about globalisation and while some people are looking forward to a globalised and fully integrated world some critics argue that this process leads to a world where the rich become richer and the poor even become poorer but does globalisation really take place more and more nations engage in a process called regionalisation regional agreements have never been so popular as today and the number of trade blocs increases today approximately 170 regional agreements exist and half of them have been established since 1990 moore 2000 most of the wto members are at least part in one of them and 50 of worldwide trade occurs between countries belonging to regional agreements ruggiero 2003 even the wto as an institution with the objective to foster world trade and to abolish measures that inhibit trade is increasingly concerned about regionalisation and the growing number of trade blocs which have the potential to circumvent and undermine the aim of the wto by offering privileges to its members and discriminating non members au and chan n d mike moore 2000 former wto director general puts it as follows is there a risk that regionalism is becoming a stumbling block more than a building block for the new wto draining energy from multilateral negotiations fragmenting international trade and creating a new international disorder characterized by growing rivalries and marginalization and the possibility of hostile blocs moore 2000 hirst and thompson 1996 argue that globalisation is an overblown term for a process which in reality will mean the formation of trade blocs rather than the whole world as one single market place this essay critically evaluates this argument by considering the pros and cons of the question whether trade blocs replace the concept of globalisation and the world as one single market place this question will be answered with the help of bifocal perspectives the second chapter considers a micro perspective by evaluating whether companies become increasingly footloose and transnational or whether companies retain a home base with significant sales in their home region or trade bloc the third chapter has a more general perspective and assesses the importance of trade blocs and its impact on inter and intra trade
