This book is the first edited compilation of selected refereed papers submitted to ERTEP 2007. The selected papers either dealt with technologies or scientific work and policy findings that address specific environmental problems affecting humanity in general but more specifically people and ecosystems in developing countries. It was not necessary for the work to have been done in a developing country but the findings and results must be appropriate or applicable to a developing country setting. It is acknowledged that environmental research technology applications and policy implementation have been demonstrated to improve environmental sustainability and protection in several developed economies. The main argument of the book is that similar gains can be achieved in developing economies and economies in transition. The book is organized into six chapters along some of the key themes discussed at the conference: environmental health management, sustainable energy and fuel, water treatment, purification and protection, mining and environment, soil stabilization and environmental monitoring. It is hoped that the contents of the book will provide an insight into some of the environmental and health management challenges confronting the developing world and the steps being taken to address them.
