nationally regarded authors andrew pytel and jaan kiusalaas bring a depth of experience to the second editions of engineering mechanics statics and dynamics that can't be surpassed they have refined their solid coverage of this material without overloading it with extraneous detail their extensive teaching experience at the pennsylvania state university gives them first hand

knowledge of students learning skill levels and how the study of mechanics needs to tie to the real world their presentation is designed to teach students how to effectively analyze a problem before plugging numbers into formulas this approach benefits students tremendously as they encounter real life problems that may not always fit into standard formulas these books are designed with a rich concise one color presentation at a substantially lower cost than competing texts

this resource provides in depth coverage of major scientific and technological developments it offers illustrated detailed coverage of the discoveries advances and milestones that continue to shape our lives

now fully incorporated with si units these books teach students the basic mechanical behaviour of materials at rest statics and in motion dynamics while developing their mastery of engineering methods of analysing and solving problems traditionally books for the statics and dynamics courses require students simply to plug problem data into standardised mathematical formulas and then compute an answer without thinking through the problem beforehand pytel and kiusalaas reject this plug and chug approach in sample problems throughout the book the authors direct students to identify the number of unknowns and independent equations in the problem before they attempt to calculate an answer in this way pytel and kiusalaas continually train students to think about how and why problems can be solved by recognising up front whether a problem is statically determinate or statically indeterminate pytel and kiusalaas is the only textbook that continually reinforces students ability to recognise determinacy and indeterminacy developing this ability in students is a priority for all instructors especially in the statics course
