this book explores the dynamics in children's everyday lives as they move between school

and the family with particular consideration of how children's motives change in response to new challenges. Professors Mariane Hedegaard and Marilyn Fleer follow four children, two from Australia and two from Denmark, over a twelve-month period. Using these case studies, they show how children's everyday activities, play, and the demands of both family and educational contexts influence their learning and development. The authors contribute to a sociocultural theory formulation that includes the child's perspective in cultural and historical contexts. Their approach yields insights that transcend specific nationalities, cultures, and socioeconomic situations. The analysis shows not just how children's family life shapes their experiences in school but how schools influence and shape their lives at home.

This undergraduate textbook introduces students to the basics of real analysis, provides an introduction to more advanced topics including measure theory and Lebesgue integration, and offers an invitation to functional analysis. While these advanced topics are not typically encountered until graduate study, the text is designed for the beginner. The author's engaging style makes advanced topics approachable without sacrificing rigor. The text also consistently encourages the reader to pick up a pencil and take an active part in the learning process. Key features include examples to reinforce theory, thorough explanations preceding definitions, theorems, and formal proofs, illustrations to support intuition, over 450 exercises designed to develop connections between the concrete and abstract. This text takes students on a journey through the basics of real analysis and provides those who wish to delve deeper the opportunity to experience mathematical ideas that are beyond the standard undergraduate curriculum.

This open access textbook welcomes students into the fundamental theory of measure, integration, and real analysis, focusing on an accessible approach. Axler lays the foundations for further study by promoting a deep understanding of key results. Content is carefully curated to suit a single course or two-semester sequence of courses, creating a versatile entry point for graduate studies in all areas of pure and applied mathematics. Motivated by a brief review of Riemann integration and its deficiencies, the text begins by immersing students in the concepts of measure and integration, Lebesgue measure, and abstract
