in recent years the selection and management of cardiac support devices have become increasingly complex due to the diversity of options available such as intra aortic balloon pumps extracorporeal membrane oxygenation and percutaneous left ventricular assist devices as a result critical care cardiology is evolving with specialists building their expertise and accumulating evidence to support shock teams and mechanical circulatory support for patients experiencing cardiogenic shock and cardiac arrest our goal is to develop strategies for managing patients with cardiovascular emergencies who require cardiac intensive care particularly those in need of mechanical circulatory support topics of interest include but are not limited to identifying the predictive factor for patient s prognosis risk stratification in patients at cvicu establishing the management of mechanical circulatory support weaning strategy from mechanical circulatory support anticoagulant strategy during mechanical circulatory support enhancing the understanding of the mechanism of cardiogenic shock and post cardiac arrest myocardial dysfunction assessing the impact of comorbidities during mechanical circulatory support evaluating the efficacy of rehabilitation in patients with critically ill at cvicu evaluating the efficacy of a hub spoke system developing the criteria of a central hub hospital developing the criteria of patients transfer and optimal methodology of interhospital transfer efficacy of the shock team we invite studies focusing on biomarkers for predicting patient outcomes scoring systems and weaning strategies from mechanical circulatory support however this research topic is open to all articles covering every aspect of critical care cardiology

diabetes has garnered significant attention as a global health issue especially in the modern era marked by lifestyle changes and dietary shifts which have contributed to its escalating prevalence with the advancement of big data technologies there is an opportunity to delve deeper into the relationship between diabetes and risk model predictions human routines and dietary patterns play a pivotal role in diabetes risk and the wealth of publicly available databases provides an opportunity for in depth exploration through this research topic we aspire to delve deeper into the forefront issues surrounding diabetes and novel biomarkers offering new perspectives and methodologies for more precise diabetes risk assessment and prevention we look forward to your contributions our research topic aims to gather the latest research on clinical indicators and novel biomarkers regarding diabetes prevention we invite contributions from researchers who can share their findings innovative methods and insights into utilizing big data for improved diabetes risk prediction studies can incorporate

various designs including large scale survey designed as cross sectional case control and cohort studies we strongly encourage the use of advanced causal inference methods such as difference in differences models instrumental variables propensity score matching and inverse probability weighting within the framework of causal inference original research covering the identification of novel biomarkers and clinical indicators for diabetes or related endocrine diseases are welcome potential sub topics include but are not limited to newly identified novel biomarkers or clinical indicators for diabetes along with endocrine diseases causality inference of risk factors for diabetes related diseases novel manners to enhance the generality of research using public databases

this research topic is apart of the series the future of checkpoint immunotherapy new roads ahead please see the series here checkpoint immunotherapy reshaping the landscape of gastrointestinal cancer treatment is a comprehensive research topic that delves into the transformative impact of immunotherapy on the management of gastrointestinal malignancies checkpoint immunotherapy has emerged as a groundbreaking approach in the treatment of gastrointestinal cancers which include malignancies of the esophagus stomach liver pancreas colon and rectum these cancers are notoriously challenging due to their complex biology and the historically limited efficacy of conventional treatments recent advancements in immunotherapy particularly checkpoint inhibitors have provided a new paradigm in cancer treatment offering hope for improved patient outcomes despite these advancements significant questions remain regarding the optimization of these therapies including the identification of patients who will benefit most and the mechanisms underlying variable responses current studies have begun to elucidate the role of predictive biomarkers such as pd l1 expression tumor mutational burden and microsatellite instability which are crucial for tailoring treatment strategies however there is a pressing need for further research to fully understand the tumor immune microenvironment interactions and to develop novel immunotherapeutic agents that can overcome resistance and enhance efficacy this research topic aims to explore the transformative impact of checkpoint immunotherapy on gastrointestinal cancer treatment it seeks to address key questions such as the identification of predictive biomarkers the mechanisms of tumor immune interactions and the development of novel therapeutic strategies by fostering collaboration between basic scientists translational researchers and clinicians this collection aims to bridge the gap between scientific discoveries and clinical applications ultimately improving patient outcomes to

gather further insights in the translational aspects of checkpoint immunotherapy in gastrointestinal cancers we welcome articles addressing but not limited to the following themes predictive biomarkers for immunotherapy response mechanistic studies of tumor immune microenvironment interactions preclinical models evaluating novel immunotherapeutic agents patient selection criteria for optimal immunotherapy outcomes clinical efficacy and real world evidence of checkpoint inhibitors challenges and future directions in immunotherapy for gastrointestinal cancers
