the book analyses the differences between the mathematical interpretation and the phenomenological intuition of the continuum the basic idea is that the continuity of the experience of space and time originates in phenomenic movement the problem of consciousness and of the spaces of representation is related to the primary processes of perception conceived as an interplay between cognitive science linguistics and philosophy the book presents a conceptual framework based on a dynamic and experimental approach to the problem of the continuum besides presenting the primitives of a theory of cognitive space and time it presents a theory of the observer analyzing the relationship among perspective points of view and unity of consciousness the book s chapters deal with the dynamic elaboration and recognition of forms from the lower to the higher processes in the various perceptual fields experimental analysis from visual auditory and tactile perception outline the basic structures of intentionality and its counterpart in language and gesture series b

perceptual organization comprises a wide range of processes such as perceptual grouping figure ground organization filling in completion

and perceptual switching the oxford handbook of perceptual organization provides a broad and extensive review of the current literature written in an accessible form for scholars and students

proposing a new paradigm for perceptual science that goes beyond standard information theory and digital computation this book breaks with the conventional model of perception that views vision as a mere inference to an objective reality on the basis of inverse optics the authors offer the alternative view that perception is an expressive and awareness generating process perception creates semantic information in such a way as to enable the observer to deal efficaciously with the chaotic and meaningless structure present at the physical boundary between the body and its surroundings vision is intentional by its very nature visual qualities are essential and real providing an aesthetic and meaningful interface to the structures of physics and the state of the brain this view brings perception firmly in line with ethology and modern evolutionary biology and suggests new approaches in all disciplines that study or require an understanding of the ontology of mind the book is the joint effort of a multidisciplinary group of authors topics covered include the relationships among stimuli neuronal processes and visual awareness after considering the mind dependent growing of information the book treats time and dynamics color shape and space language and perception perception art and design

while the scientific study of vision is well advanced a universal theory of qualitative visual appearances texture shape colour and so on is still lacking this interdisciplinary handbook presents the work of leading researchers around the world who have taken up the challenge of defining and formalizing the field of experimental phenomenology presents and discusses a new perspective in vision science and formalizes a field of study that will become increasingly significant to researchers in visual science and beyond the contributors are outstanding scholars in their fields with impeccable academic credentials including jan j koenderink irving biederman donald hoffmann steven zucker and nikos logothetis divided into five parts linking psychophysics and qualities qualities in space time and motion appearances measurement and qualities science and aesthetics of appearances each chapter will have the same structure consisting of topic overview historical roots debate new perspective methods results and recent developments

this volume starts from an interdisciplinary expertise of the contributors and chooses to work on the very origins of conscious qualitative states in perception the leading research paradigm can be synthesized in phenomenology to neurons to stimuli and backwards since as a starting point it has taken the phenomenal appearances in the visual field specifically the leading theme of the volume is the co presence and interaction of diverse types of spaces in vision like the optical space of psychophysics and of neural elaboration the qualitative space of phenomenal appearances and its relation with the pictorial space of art the contributors to the volume agree in arguing that those spaces follow different rules of organization whose specific singularity and reciprocal dependence have to be individuated as a preliminary step to understand the architecture of the conscious awareness of our environment and to conceive its potential implementation in constructing any kind of embodied intentional agents series b

this book presents an historical and conceptual reconstruction of the theories developed by Meinong and a group of philosophers and experimental psychologists in Graz at the turn of the 19th century adhering closely to original texts the contributors explore Meinong's roots in the school of Brentano complex theories such as the theory of intentional reference and direct reference and ways of developing philosophy which are closely bound up with the sciences particularly psychology providing a faithful reconstruction of both Meinong's contributions to science and the school that arose from his thought this book shows how the theories of the Graz school raise the possibility of engaging in the scientific metaphysics and ontology that for so long have been considered off limits
