this book is intended as a text for a problem solving course at the first or second year university level as a text for enrichment classes for talented high school students or for mathematics competition training it can also be used as a source of supplementary material for any course dealing with algebraic equations or inequalities or to supplement a standard elementary number theory course there are already many excellent books on the market that can be used for a problem solving course however some are merely collections of prob lems from a variety of fields and lack cohesion others present problems according to topic but provide little or no theoretical background most problem books have a limited number of rather challenging problems while these problems tend to be quite beautiful they can appear forbidding and discouraging to a beginning student even with well motivated and carefully written solutions as a consequence students may decide that problem solving is only for the few high performers in their class and abandon this important part of their mathematical and indeed overall education

solution of equations and systems of equations second edition deals with the laguerre iteration interpolating polynomials method of steepest descent and the theory of divided differences the book reviews the formula for confluent divided

differences newton s interpolation formula general interpolation problems and the triangular schemes for computing divided differences the text explains the method of false position regula falsi and cites examples of computation using the regula falsi the book discusses iterations by monotonic iterating functions and analyzes the connection of the regula falsi with the theory of iteration the text also explains the idea of the newton raphson method and compares it with the regula falsi the book also cites asymptotic behavior of errors in the regula falsi iteration as well as the theorem on the error of the taylor approximation to the root the method of steepest descent or gradient method proposed by cauchy ensures global convergence in very general conditions this book is suitable for mathematicians students and professor of calculus and advanced mathematics
