this paper investigates the trend of the wage inequality and the metropolitan wage premium in the united states during the 1980s two distinct sets of literature documented that the wage inequality between skilled and unskilled workers and the metropolitan wage premium have risen significantly during the decade when we combine these two sets of evidence and consider the interaction between skill and location however the increasing trends of the skill wage gap and the metropolitan wage premium almost disappear most of the dynamic changes are picked up by the interaction term an extra metropolitan wage premium for skill which rises significantly over the decade as a partial explanation we find an increasing trend of the skill wage inequality across industries and occupations within metropolitan areas relative to non metropolitan areas this finding suggests that the skill biased technology alone may not sufficiently explain the growing wage inequality and it can be interpreted as a metropolitan specific phenomenon to an extent

the authors intend this book to act as a short topical and issue based supplement for courses dealing with race and gender studies economics women s studies sociology and public policy where concern needs to be directed against wage inequality

this report seeks to explain the over time trends in wage inequality in latin america and the caribbean lac since the mid 1990s it explains how wage inequality has been associated with household income inequality in lac in the past decades and discusses how labor supply and labour demand trends have affected wage inequality the latin american region achieved something truly remarkable during the 2000s it sustained vigorous economic growth with declining inequality other regions in the world grew strongly during this period but this growth was not shared equitably however lower commodity prices and slower growth in china have reduced latin america s growth prospects in recent years

at the same time inequality reduction has halted in many countries as the new low growth scenario hits labor markets it is important to ask whether the social gains of the 2000s can be sustained will lower wage growth occur across all segments of the wage distribution in latin america or will the slowdown disproportionately hurt those who have less will the economic slowdown put the brakes on the reduction of wage inequality in latin america to answer these forward looking questions and to know what to expect it is essential to understand the causes of the observed changes in wage inequality in the past decades which is the focus of this research project

this book integrates the agricultural producer service sector into a three sector general equilibrium framework to examine the modernization of small scale agriculture in developing economies by incorporating agricultural transformation and rural urban migration dynamics it presents a theoretical analysis of the determinants of wage inequality between skilled and unskilled labor from multiple perspectives over the past few decades industrialization and urbanization have progressed in parallel driving the modernization of the agricultural sector traditional development economics often conceptualizes agricultural modernization within the context of large scale operations assuming that traditional agriculture can directly adopt modern non agricultural intermediate inputs after some transformations however small scale agriculture the dominant form in developing countries follows a distinct modernization path this divergence manifests in two key ways first labor substitution and migration the introduction of modern intermediate non agricultural inputs tends to displace agricultural labor accelerating rural urban migration second the role of the agricultural producer service sector due to the prevalence of small scale operations an intermediary sector the agricultural producer service sector emerges to facilitate the modernization process these differences significantly influence intersectoral labor allocation and wage inequality given that agricultural modernization policy shifts and socioeconomic changes concurrently affect labor allocation it is crucial to analyze how these exogenous factors shape wage disparities in the presence of agricultural transformation to model this process the book establishes a two layer vertical production structure non agricultural goods are partially utilized by the agricultural producer service sector which then produces intermediate inputs that substitute for agricultural labor the study focuses on three major factors that profoundly impact rural labor migration and wage inequality pro rural policies mitigation labor market distortion raising rural public infrastructure increased agricultural subsidies fdi and internal remittances and technological progress green technological progress and

skill biased technical change the findings offer novel insights into wage inequality in developing economies and provide a theoretical foundation for formulating development policies

this book explores income inequality across five main headings it starts by explaining some key terms in the inequality debate it then examines recent trends and explains why income inequality varies between countries

many ideas about poverty and discrimination are nothing more than politically driven assertions unsupported by evidence and even politically neutral studies that do try to assess evidence are often simply unreliable in poverty and discrimination economist kevin lang cuts through the vast literature on poverty and discrimination to determine what we actually know and how we know it using rigorous statistical analysis and economic thinking to judge what the best research is and which theories match the evidence this book clears the ground for students social scientists and policymakers who want to understand and help reduce poverty and discrimination it evaluates how well antipoverty and antidiscrimination policies and programs have worked and whether they have sometimes actually made the problems worse and it provides new insights about the causes of and possible solutions to poverty and discrimination the book begins by asking who is poor and by giving a brief history of poverty and poverty policy in the united states in the twentieth century including the welfare reform act of 1996 among the topics covered are the changing definition of poverty the relation between economic growth and poverty and the effects of labor markets education family composition and concentrated poverty the book then evaluates the evidence on racial discrimination in areas such as education employment and criminal justice as well as sex discrimination in the labor market and assesses the effectiveness of antidiscrimination policies throughout the book is grounded in the conviction that we must have much better empirical knowledge of poverty and discrimination if we hope to reduce them
