the last decade has seen the rise of urban design which has taken a central position in the

new agendas for urban regeneration and renaissance urban design has moved from marginality to mainstream the principles espoused by urban designers over the past thirty years are now accepted as key to a better urban environment and as we move towards greater sustainability different ideas are emerging that are challenging some of the accepted urban design norms urban design is at a watershed urban design futures presents essays from an international cast of authors to review progress and explore emerging ideas should urban design reflect the future rather than recreate the past what are the new driving forces that will shape urban living and hence urban design in the future this book explores new concepts and points the way towards a series of urban design paradigms for the twenty first century

the pearl river delta region has been severely engineered throughout its process of historical emergence as it is about to confront a new wave of changes in the present century driven by economic growth industrial activity and growth of maritime operations the book proposes endurance as a way of urban design in the pearl river delta region to organize space around the changing frontiers between territory inhabited by people and south china sea the book addresses the urgency to counter the risks posed to the delta city region by proposing scenarios for urban growth the design futures for the pearl river delta are formed by acknowledging the socio political drift towards one direction above another which influences the future organization or reorganization of space the historical emergence of the river delta highlights the fact that it is conditioned to multiple directives and multiple transformations which at the same time makes it exemplary yet idiosyncratic therefore the scenarios of city region development presented in the book depict an integration of systems of flows and the symbiosis of conflicting powers a series of specific questions lead to principles that drive each future growth trajectory which is represented through a series of diagrammatic logics in order to organize space through structures of landscape systems and those of new territories and networks

given the rapid evolution of concepts such as smart cities who are the architects riding the wave of new possibilities for urban design how do contemporary agencies find pathways to

understand the challenges and opportunities presented by evolving urban technology and how does architecture engage with the expanding pool of associated disciplines how should schools of architecture and urban design engage with radical digitalised urbanism this issue of *ad* claims that this is contested territory the two dimensionality of planners urban construct is as limited as engineers predilection to zero in and solve problems urban futures contends that society needs a much broader professional brush than has been applied in the past interdisciplinary urban design professionals who can reach across the philosophy and mundanity of urban existence with a creative eye the issue identifies a selection of internally resourceful visionaries who combine sociology geography logistics and systems theory with the practical realities and challenges of mobility sustainable materials food water and energy supply and waste disposal crucially they seek to ensure better urban futures and a civil and convivial urban experience for all city dwellers contributors refik anadol philip belesky shajay bhooshan jane burry and marcus white thomas daniell vicente guallart shan he wanyu he dan hill justyna karakiewicz tom kvan areti markopoulou ed parham carlo ratti ferran sagarra and bige tunçer featured architects arup digital studio guallart architects space10 space syntax unstudio and xkool technology

recoded city examines alternative urban design planning and architecture for the other 90 namely the practice of participatory placemaking a burgeoning practice that co author thomas ermacora terms recoding in combining bottom up and top down means of regenerating and rebalancing neighbourhoods affected by declining welfare or struck by disaster this growing movement brings greater resilience *recoded city* sheds light on a new epoch in the relationship between cities and civil society by presenting an emerging range of collaborative solutions and distributed governance models the authors draw on their own fresh research of global pioneers forging localist design strategies public realm interventions and new stakeholder dynamics as the world becomes increasingly digital and virtual a myriad of online tools and technological options is becoming available these give unprecedented co creation opportunities to communities and professionals alike yielding the benefits of a more open diy society because of its close engagement with people place and local identity the field of participatory placemaking has huge untapped potential responding

to the challenges of the anthropocene era recoded city is for decision makers developers and practitioners working globally to make better and more liveable cities

what might our cities look like in ten twenty or fifty years how may future cities face global challenges imagining the city of the future has long been an inspiration for many architects artists and designers this book examines how cities of the future have been visualised what these projects sought to communicate and what the implications may be for us now it provides a visual history of the future and explores the relationships between different visualisation techniques and ideologies for cities thinking about what futures are who they are for why they are desirable and how and when they are to be brought into being is central to this book through visualisation we are able to experiment in ways that would be impractical and potentially hazardous in the real world and this book therefore aims to

contribute toward a better understanding of the power and agency of visualisations for future cities in this lavishly illustrated text the authors apply several critical lenses to consider the subject in different ways technological futures social futures and global futures providing a comprehensive survey and analysis of visions for future cities and engaging creatively with how we perceive tomorrow's world and future studies more widely

how the emerging field of speculative futures can help us dream and build better sustainable and more equitable cities for everyone speculative futures design approaches that help us visualize new and potential worlds move us beyond what currently exists into what could one day be inspired by art film fiction and industrial design they use speculation to provoke imagine and dream into what lies ahead written for futurists urbanists and artists looking to enact city wide transformation and for readers at the intersection of disruption design innovation and city living this book offers creative paths toward urban resilience using design tools that already exist artist and urbanist johanna hoffman uses an interdisciplinary lens informed by her experience in architecture art engineering and construction to examine how we can reimagine our cities at every level as individuals in community and on a professional scale hoffman blends precedent studies compelling research and professional memoir connecting urban development issues with the processes and actions best positioned to create better solutions for our cities the result is a dynamic field guide that uses speculative futures to imagine advocate for and adapt to modern scales scopes and speeds of change while this book is of great utility to professionals in the urban design and planning industries it's also for people who resist received capitalistic technocratic ways of thinking readers who seek new solutions to old problems with anti colonial living systems oriented lenses

the members of the international congress of modern architecture ciam such as josep lluis sert le corbusier walter gropius and their american associates developed the discipline now called urban design which has had a significant influence on both university departments and building projects around the world
