this is the ebook of the printed book and may not include any media website access codes or print supplements that may come packaged with the bound book for upper division undergraduate and mba students as well as business professionals a holistic approach to project and enterprise valuation the art and science of corporate investment decisions provides an up to date integrated treatment of the valuation of investment opportunities taking both industry practice and recent advances in valuation methods into consideration this text introduces students to a broad spectrum of

agency theory is a new branch of economics which focusses on the roles of information and of incentives when individuals cooperate with respect to the utilisation of resources basic approaches are coming from microeconomic theory as well as from risk analysis among the broad variety of applications are the many designs of contractual arrangements organizations and institutions as well as the manifold aspects of the separation of ownership and control so fundamental for business finance after some twenty years of intensive research in the field of information economics it might be timely to present the most basic issues questions models and applications this volume agency theory information and incentives offers introductory surveys as well as results of individual research that seem to shape that field of information economics appropriately some 30 authors were invited to present their subjects in such a way that students could easily become acquainted with the main ideas of information economics so the aim of agency theory information and incentives is to introduce students at an intermediate level and to accompany their work in classes on microeconomics information economics organization management theory and business finance the topics selected form the eight sections of the book 1 agency theory and risk sharing 2 information and incentives 3 capital markets and moral hazard 4 financial contracting and dividends 5 external accounting and auditing 6 coordination in groups 7 property rights and fairness 8 agency costs

bachelor thesis from the year 2015 in the subject business economics investment and finance grade 1.0 european university viadrina frankfurt oder language english abstract when making project decisions under uncertainty the traditional net present value npv method is a popular choice among practitioners which is also taught in many financial textbooks however there are certain issues with the traditional method that are often overseen resulting in substantial undervaluation of a particular project thus the powerful tool of real option valuation was introduced to make up for this deficit the purpose of this paper is to show a more comprehensive method for valuing projects under uncertainty namely real options by explaining the necessary mathematical tools and by giving an overview of the compelling approaches in financial literature after explaining the underlying theory and providing a valuation example the paper will attempt to provide reasons to the limited practice of real option analysis in the industry bei projektentscheidungen unter unsicherheit ist die traditionelle kapitalwertmethode npv unter praktikern sehr beliebt weshalb sie in finanzlehrbüchern vorwiegend berücksichtigt wird die probleme in die die traditionelle methode resultiert werden allerdings häufig übersehen und führen zu einer substantiellen unterbewertung des jeweiligen projektes eine umfassendere methode zur bewertung von projekten unter unsicherheit die real option analyse soll diesem defizit entgegenwirken die hierfür benötigten mathematischen hilfsmitteln werden erläutert und es wird ein Überblick über die methodischen ansätze aus der finanzliteratur gegeben im anschluss an die beschreibung der zugrunde liegenden theorie und ein bewertungsbeispiel werden gründe für die eingeschränkten anwendung der real options analyse in der privatwirtschaft aufgezeigt

the theoretical foundation for real options goes back to the mid 1980s and the development of a model that forms the basis for many current applications of real option theory over the last decade the theory has rapidly expanded and become enriched thanks to increasing research activity modern real option theory may be used for the valuation of entire companies as well as for particular investment projects in the presence of uncertainty as such the theory of real options can serve as a tool for more practically oriented decision making providing management with strategies maximizing its capital market value this book is devoted to

examining a new framework for classifying real options from a management and a valuation perspective giving the advantages and disadvantages of the real option approach impulse control theory and the theory of optimal stopping combined with methods of mathematical finance are used to construct arbitrarily complex real option models which can be solved numerically and which yield optimal capital market strategies and values various examples are given to demonstrate the potential of this framework this work will benefit the financial community companies as well as academics in mathematical finance by providing an important extension of real option research from both a theoretical and practical point of view

this is the ebook of the printed book and may not include any media website access codes or print supplements that may come packaged with the bound book seeing the economic realities of the modern corporation through an integrated approach titman martin presents an integrated approach to both project and enterprise valuation showing readers the economic realities that today s modern corporations face this text also goes beyond standard dcf analysis by including additional valuation methods that are commonly used in practice such as comparables simulations and real options the second edition includes an increased emphasis on enterprise valuation a new chapter on financial forecasting and enhanced examples and illustrations
