the creation and implementation of integrated information systems involves a variety of collaborators including people from specialist departments informatics external advisers and manufacturers they need clear rules and limits within which they can process their individual sub tasks in order to ensure the logical consistency of the entire project an architecture therefore needs to be established to determine the components that make up the information system and the methods to be used to describe it whereas previously individual descriptive viewpoints such as the functional representation or the data model have dominated this book creates an architecture within which the function organization and data views of an information system throughout the development phases of the requirements definition design specification and the implementation description can be given equal treatment the aris architecture thereby developed is described in concrete terms as an information model within the entity relationship approach this information model provides the basis for the systematic and rational application of methods in the development of information systems furthermore it is also the basis for a repository in which the enterprise s application specific data organization and function models can be stored an essential property of the aris architecture is that the various views are not only considered in isolation but a control view also represents their relationships with each other as a result new developments such as distributed databases or object oriented approaches can be incorporated in the architecture i would like to thank irene cameron for her careful translation of the german original
