minerals solubilization results from the dissolution of rocks and mineral substrates by microbial mechanical and chemical processes the application of microorganisms in biomining is a biotechnological approach that involves extracting and recovering metals from ores microorganisms interact with minerals to colonize and exploit habitats and demonstrate the capacity to scavenge critical elements with low bioavailability such as iron and phosphorus there is an ongoing need to improve soil fertility and crop production particularly in dry places to remediate toxic soils and clean stone artworks and structures a complete understanding of microorganisms mediated mineral weathering processes may provide a significant opportunity for researchers to develop novel solutions to overcome challenges in agriculture the environment and industry

this book comprises the selected papers from the 1st springer conference of the arabian journal of geosciences cajg 1 tunisia 2018 the volume is of interest to all researchers and practitioners in the fields of hydrology hydrogeology hydrochemistry water resources and hydrologic engineering water is a dynamic finite and vulnerable but resilient natural resource to be protected in an environmentally sustainable manner water systems in different frameworks requires a comprehensive understanding of climatology geology hydrogeology hydrochemistry hydrodynamics and surface hydrology in addition it is highlighted the role of the variability and climate change in water systems furthermore water has a vital significance to the entire socio economic sector this volume offers an overview of the state of the art related to water science and technology in model regions in europe africa middle east asia and america but mainly focuses on the mediterranean environment and surrounding regions it gives new insights on characterisation evaluation quality management protection modelling on environmental hydrology groundwater hydrochemistry sustainable water resources studies and hydrologic engineering approaches by international researchers main topics include 1 hydrology climatology and water related ecosystems 2 hydrochemistry and isotopic hydrology 3 groundwater assessment and management mapping exploration abstraction and modelling 4 water resources sustainability and climate change 5 hydrologic engineering and urban groundwater

this book includes over three hundred and seventy five short papers presented during the second emcei which was held in sousse tunisia in october 2019 after the success of the first emcei in 2017 the second installment tackled emerging environmental issues together with new challenges e g by focusing on innovative approaches that contribute to achieving a sustainable environment in the mediterranean and surrounding regions and by highlighting to decision makers from related sectors the environmental considerations that should be integrated into their respective activities presenting a wide range of environmental topics and new findings relevant to a variety of problems in these regions this volume will appeal to anyone working in the subject area and particularly to students

interested in learning more about new advances in environmental research initiatives in view of the worsening environmental degradation of the mediterranean and surrounding regions which has made environmental and resource protection into an increasingly important issue hampering sustainable development and social welfare

this book is both a review and a look to the future highlighting challenges for better predicting quantitatively the impact of diagenesis on reservoir rocks classical diagenesis studies make use of a wide range of descriptive analytical techniques to explain specific relatively time framed fluid rock interaction processes and deduce their impacts on reservoir rocks future operational workflows will consist of constructing a conceptual diagenesis model quantifying the related diagenetic phases and modelling the diagenetic processes innovative approaches are emerging for applied quantitative diagenesis providing numerical data that can be used by reservoir engineers as entry input data and for validating results of numerical simulations geometry based geostatistical and geochemical modelling do not necessarily mimic natural processes they rather provide reasonable solutions to specific problems

the magnesium technology symposium at the tms annual meeting exhibition is one of the largest yearly gatherings of magnesium specialists in the world papers represent all aspects of the field ranging from primary production to applications and recycling moreover papers explore everything from basic research findings to industrialization magnesium technology 2022 is a definitive reference that covers a broad spectrum of current topics including novel extraction techniques primary production alloys and their production integrated computational materials engineering thermodynamics and kinetics plasticity mechanisms cast products and processing wrought products

and processing forming joining and machining corrosion and surface finishing fatigue and fracture dynamic response structural applications degradation and biomedical applications emerging applications additive manufacturing of powders and recycling ecological issues and life cycle analysis

the 7th installment of the rewas conference series held at the tms annual meeting exhibition focuses on developing tomorrow s technical cycles the papers in thiscollection explore the latest technical and societal developments enabling sustainabilitywithin our global economy with an emphasis on recycling and waste management the 2022 collection includes contributions from the following symposia coupling metallurgy and sustainability an epd symposium in honor of diran apelian recovering the unrecoverable sustainable production and development perspectives automation and digitalization for advanced manufacturing decarbonizing the materials industry

encyclopedia of agriculture and food systems second edition five volume set addresses important issues by examining topics of global agriculture and food systems that are key to understanding the challenges we face questions it addresses include will we be able to produce enough food to meet the increasing dietary needs and wants of the additional two billion people expected to inhabit our planet by 2050 will we be able to meet the need for so much more food while simultaneously reducing adverse environmental effects of today's agriculture practices will we be able to produce the additional food using less land and water than we use now these are among the most important challenges that face our planet in the coming decades the broad themes of food systems and people agriculture and the environment the science of agriculture agricultural products and agricultural production systems are covered in more than 200 separate chapters of this work the book provides information that serves as the foundation for discussion of the food and environment challenges of the world an international group of highly respected authors addresses these issues from a global perspective and provides the background references and linkages for further exploration of each of topics of this comprehensive work addresses important challenges of sustainability and efficiency from a global perspective takes a detailed look at the important issues affecting the agricultural and food industries today full colour throughout
