collects the 77 papers presented during the november 2002 symposium on the mathematical foundations of computing among the topics are abstract combinatorial programs and efficient property testers a lower bound for testing 3 colorability in bounded degree graphs a spectral algorithm for learning

randomized algorithms discusses two problems of fine pedigree counting and generation both of which are of fundamental importance to discrete mathematics and probability when asking questions like how many are there and what does it look like on average of families of combinatorial structures answers are often difficult to

find we can be blocked by seemingly intractable algorithms randomized algorithms shows how to get around the problem of intractability with the markov chain monte carlo method as well as highlighting the method s natural limits it uses the technique of coupling before introducing path coupling a new technique which radically simplifies and improves upon previous methods in the area
