the year 2007 could perhaps accurately be described as the year when climate change finally received the attention that this challenge deserves globally much of the information and knowledge that was created in this field during the year was the result of the findings of the fourth assessment report ar4 of the intergovernmental panel on climate change ipcc which were disseminated on a large scale and reported extensively by the media this was the result not only of a heightened interest on the part of the public on various aspects of climate change but also because the ipcc itself proactively attempted to spread the findings of its ar4 to the public at large the interest generated on the scientific realities of climate change was further enhanced by the award of the nobel peace prize to the ipcc and former vice president of the us al gore by taking this decision in favour of a leader who has done a great deal to create awareness on climate change and a body that assesses all scientific aspects of climate change and disseminates the result of its findings the norwegian nobel committee has clearly drawn the link between climate change and peace

international law governing the settlement of disputes through law based forums such as courts tribunals and arbitral tribunals is fraught with limitations that are becoming especially apparent with respect to disputes that involve the protection of the environment however despite the deficiencies of the law international courts and tribunals have issued judgements in disputes involving the protection of the environment at the global level the international court of justice icj the appellate body of the world trade organization wto and the tribunal for the law of the sea itlos have handed down decisions in relevant cases in addition other legal forums can also be called upon to decide cases involving international environmental law such forums include the environmental chamber of the icj and the permanent court of arbitration pca under its general facilities and under the environmental facility that it is planning to establish similarly special bodies such as the united nations compensation commission uncc may decide on cases moreover regional forums such as the european court of human rights echr the inter american court of human rights and the court of justice of the european community ecj have ruled on cases involving international environmental law despite these developments calls for the establishment of an international environmental court at the global level persist several arguments have been

advanced to justify the establishment of an international environmental court for example the very many pressing environmental problems that exist today and the need for a bench consisting of experts in international environmental law to consider these problems the need for individuals and groups to have access to environmental justice at the international level the need to enable international organizations to be parties to disputes related to the protection of the environment and the need for dispute settlement procedures that enable the common interest in the environment to be addressed arguments against the establishment of an international environmental court have been advanced as well these arguments include the following the proliferation of international courts and tribunals would result in the fragmentation of international law existing courts and tribunals are or can be well equipped to consider cases involving environmental issues and disputes involving international environmental law also involve other aspects of international law this publication explores the arguments for and against the establishment of an international environmental court examining topics such as the definition of an international environmental dispute and the concomitant expertise required on the bench fragmentation and its root causes access to justice and the representation of community interests the author argues that the establishment of an international environmental court is not the most desirable option and she suggests that it might be more fruitful if we consider developments in environmental law as well as in other relevant areas of international law from a different perspective namely that of administrative law and reassess the relationship between international and national law such an approach she argues is warranted if *inter alia* viable means for resolving environmental disputes that may arise are to be identified
