the unified small disturbance equations are numerically solved using the well known lax

wendroff finite difference technique the method allows complete determination of the inviscid flow field and surface properties as long as the flow remains supersonic shock waves and other discontinuities are accounted for implicitly in the numerical method this technique was programmed for general application to the three dimensional case the validity of the method is demonstrated by calculations on cones axisymmetric bodies lifting bodies delta wings and a conical wing body combination part 1 contains the discussion of problem development and results of the study part 2 contains flow charts subroutine descriptions and a listing of the computer program

the model was subjected to unusually large inputs of sinusoidal power and did not show any drastic tendencies toward being unstable
