understanding for first year graduate students in engineering and for workers in research and development at an equivalent level in addition consulting experiences in a number of industries indicate that many technical workers in research and development lack knowledge of the methodologies given in this work this lack makes the work of planning and controlling computations and experiments less efficient in many cases it also implies that the coordinated grasp of the phenomena which is so critical to effective research and development work will be less than it might be the materials covered in this work focus on the relationship between mathematical models and the physical reality such models are intended v vi preface to the springer edition to portray understanding these relationships remains a key factor in simplifying and generalizing correlations predictions test programs and computations moreover as many teachers of engineering know this kind of understanding is typically harder for students to develop than an understanding of either the mathematics or the physics alone
